demonstrative prototypes This book also shows that low profile low cost high gain electronic beam steering and polarization agile antennas can be fabricated in larger sizes by using existing automated liquid crystal display manufacturing techniques The innovative ideas and method described in this work represent a considerable advancement in the field of electronically reconfigurable antennas based on liquid crystal technology and are expected to draw significant interest in the future Such antennas may become important for example in mobile terminals integrated into the body of laptops in the cover or of automobiles in the rooftop ships or boats for which flat low profile and low cost antennas are required **Circuits, Devices And Systems, 5Th Ed** Ralph J. Electronic Circuit Design Thomas Henry O'Dell, 1988-09-15 The theme of this new textbook is the practical element of electronic circuit design Dr O Dell whilst recognising that theoretical knowledge is essential has drawn from his many years of teaching experience to produce a book which emphasises learning by doing throughout However there is more to circuit design than a good theoretical foundation coupled to design itself Where do new circuit ideas come from This is the topic of the first chapter and the discussion is maintained throughout the following eight chapters which deal with high and low frequency small signal circuits opto electronic circuits digital circuits oscillators translinear circuits and power amplifiers In each chapter one or more experimental circuits are described in detail for the reader to construct a total of thirteen project exercises in all The final chapter draws some conclusions about the fundamental problem of design in the light of the circuits that have been dealt with in the book The book is intended for use alongside a foundation text on the theoretical basis of electronic circuit design It is written not only for undergraduate students of electronic engineering but also for the far wider range of reader in the hard or soft sciences in industry or in education who have access to a simple electronics laboratory
