respond only to the invisible hand of the free markets or the iron fist of a controlling government In the last decade however this fallacy has finally begun to unravel as hundreds of studies conducted across dozens of cultures have found that most people will act far more cooperatively than previously believed Here Harvard University Professor Yochai Benkler draws on cutting edge findings from neuroscience economics sociology evolutionary biology political science and a wealth of real world examples to debunk this long held myth and reveal how we can harness the power of human cooperation to improve business processes design smarter technology reform our economic systems maximize volunteer contributions to science reduce crime improve the efficacy of civic movements and more For example he describes how By building on countless voluntary contributions open source software communities have developed some of the most important infrastructure on which the World Wide Web runs Experiments with pay as you wish pricing in the music industry reveal that fans will voluntarily pay far more for their favorite music than economic models would ever predict Many self regulating communities from the lobster fishermen of Maine to farmers in Spain live within self regulating system for sharing and allocating communal resources Despite recent setbacks Toyota s collaborative shop floor supply chain and management structure contributed to its meteoric rise above its American counterparts for over a quarter century Police precincts across the nation have managed to reduce crime in tough neighborhoods through collaborative trust based community partnerships A must read for anyone who wants to understand the dynamics of cooperation in 21st century life The Penguin and the Leviathan not only challenges so many of the ways in which we live and work it forces us to rethink our entire view of human nature
