Klaus Mathis, Bruce R. Huber, 2017-04-07 This anthology discusses important issues surrounding environmental law and economics and provides an in-depth analysis of its use in legislation, regulation, and legal adjudication from a neoclassical and behavioural law and economics perspective. Environmental issues raise a vast range of legal questions: to what extent is it justifiable to rely on markets and continued technological innovation, especially as it relates to present exploitation of scarce resources? Or is it necessary for the state to intervene? Regulatory instruments are available to create and maintain a more sustainable society: command and control regulations, restraints, Pigovian taxes, emission certificates, nudging policies, etc. If regulation in a certain legal field is necessary, which policies and methods will most effectively spur sustainable consumption and production in order to protect the environment while mitigating any potential negative impact on economic development? Since the related problems are often caused by scarcity of resources, economic analysis of law can offer remarkable insights for their resolution. Part I underlines the foundations of environmental law and economics. Part II analyses the effectiveness of economic instruments and regulations in environmental law. Part III is dedicated to the problems of climate change. Finally, Part IV focuses on tort and criminal law. The twenty-one chapters in this volume deliver insights into the multifaceted debate surrounding the use of economic instruments in environmental regulation in Europe      **Institutions, Economic**

**Performance and Sustainable Development** Biman C. Prasad, Clement Allan Tisdell, 2006 Fiji has distinct institutional features that make it an ideal case for examining and discussing the consequences of institutional arrangements, particularly the nature of property rights for national economic performance, development prospects, and the state of the environment, which in turn reflects a nation's ability to achieve sustainable development. Furthermore, the nature of institutional arrangements in Fiji can be used to illustrate aspects of both the new and the old institutional economics. Apart from the fact that Fiji provides considerable scope for the exploration of institutional economics and its applications, Fiji is a comparatively important island nation in the south-west Pacific that is an important member of the Pacific Island Forum grouping of 14 island nations. The recent development of Fiji has been much influenced by its social history, particularly by its institutional

structures established or codified during British colonial rule Its present racial composition is largely a product of British colonisation of Indians brought to Fiji by the British to produce sugar cane as a contribution to the economic development of the former British Empire In many respects the type of global imperialism that was well established during the nineteenth century was a forerunner to modern economic globalisation which involves a mixture of free trading blocs and multilateralism The current population mixture of Fiji consisting of about equal numbers of Indian Fijians and Indigenous Fijians has its roots in Fiji s colonial history Furthermore the codified systems of property rights which largely excludes Indian Fijians from the ownership of land was established by the British It has been a major source of ethnic tension and of social and political conflict in Fiji We show that this system of property rights has had important negative consequences for economic growth in Fiji for the economic performance of its industries and for the conservation of its natural resources natural resources which may not be equitable and which also does not appear to be efficient administratively This adds to social and political tension in Fiji

**Ecological Economics for the Anthropocene** Peter G. Brown, Peter Timmerman, 2015-09-01 Ecological Economics for the Anthropocene provides an urgently needed alternative to the long dominant neoclassical economic paradigm of the free market which has focused myopically even fatally on the boundless production and consumption of goods and services without heed to environmental consequences The emerging paradigm for ecological economics championed in this new book recenters the field of economics on the fact of the Earth s limitations requiring a total reconfiguration of the goals of the economy how we understand the fundamentals of human prosperity and ultimately how we assess humanity s place in the community of beings Each essay in this volume contributes to an emerging revolutionary agenda based on the tenets of ecological economics and advances new conceptions of justice liberty and the meaning of an ethical life in the era of the Anthropocene Essays highlight the need to create alternative signals to balance one dimensional market price measurements in judging the relationships between the economy and the Earth s life support systems In a lively exchange the authors question whether such ideas as ecosystem health and the environmental data that support them are robust enough to inform policy Essays explain what a taking it slow or no growth approach to economics looks like and explore how to generate the cultural and political will to implement this agenda This collection represents one of the most sophisticated and realistic strategies for neutralizing the threat of our current economic order envisioning an Earth embedded society committed to the commonwealth of life and the security and true prosperity of human society

**Forestry Economics** John E. Wagner, 2011-07-26 Forestry Economics introduces students and practitioners to all aspects of the management and economics of forestry The book adopts the approach of managerial economics textbooks and applies this to the unique processes and problems faced by managers of forests While most forestry economics books are written by economists for future economists what many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions John E Wagner draws on his twenty years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers There are three unique features of this book The first is its organization The material is organized around two common economic models used in forest and natural resources management decision making The second is the use of case studies from various disciplines Outdoor and Commercial Recreation Wood Products Engineering Forest Products and Forestry The purpose of these case studies is to provide students with applications of the concepts being discussed within the text The third is revisiting the question of how to use economic information to make better business decisions at the end of each chapter This ties each chapter to the preceding ones and reinforces the hypothesis that a solid working knowledge of these economic models and the information they contain are necessary for making better business decisions This textbook is an invaluable source of clear and accessible information on forestry economics and management for not only economics students but for students of other disciplines and those already working in forestry and natural resources
