This monograph provides the first cross linguistic study of repair strategies in verbal fronting verb doubling and do support addressing both typological properties and theoretical aspects First it brings together data hitherto scattered across the empirical and theoretical literature and adds newly collected data from two African languages For each of the 47 languages the properties of verbal fronting are documented in detail Based on this sample the empirical part establishes two novel typological generalizations regarding the interaction between the size of the fronted category and the type of repair strategy used The first of these identifies a systematic typological gap No language that allows both verb and verb phrase fronting has do support with the former and verb doubling with the latter In the theoretical part it is shown that previous theories of verb doubling do support are unable to account for both generalizations A new approach within the Copy Theory of the Minimalist Framework is developed that rests on the interaction of head movement copy deletion and the properties of different movement types The book thus provides the first comprehensive empirical and theoretical overview of repair patterns in verbal fronting

Logic and Theory of Algorithms Arnold Beckmann, Costas Dimitracopoulos, Benedikt Löwe, 2008-06-11 CiE 2008 Logic and Theory of Algorithms Athens Greece June 15 20 2008 Computability in Europe CiE is an informal network of European scientists working on computability theory including its foundations technical development and applications Among the aims of the network is to advance our theoretical understanding of what can and cannot be computed by any means of computation Its scientific vision is broad computations may be performed with discrete or continuous data by all kinds of algorithms programs and machines Computations may be made by experimenting with any sort of physical system obeying the laws of a physical theory such as Newtonian mechanics quantum theory or relativity Computations may be very general depending on the foundations of set theory or very specific using the combinatorics of finite structures CiE also works on subjects intimately related to computation especially theories of data and information and methods for formal reasoning about computations The sources of new ideas and methods include practical developments in areas such as neural networks quantum computation natural computation molecular computation computational learning

Applications are everywhere especially in algebra analysis and geometry or data types and programming Within CiE there is general recognition of the underlying relevance of computability to physics and a broad range of other sciences providing as it does a basic analysis of the causal structure of dynamical systems This volume Logic and Theory of Algorithms is the proceedings of the fourth in a series of conferences of CiE that was held at the University of Athens June 15-20 2008

User's guide for RAM D. Bruce Turner, Joan Hrenko Novak, 1978

A Practical Guide to Price Index and Hedonic

Techniques Ana M. Aizcorbe, 2014-06-12 This book provides an accessible guide to price index and hedonic techniques with a focus on how to best apply these techniques and interpret the resulting measures One goal of this book is to provide first hand experience at constructing these measures with guidance on practical issues such as what the ideal data would look like and how best to construct these measures when the data are less than ideal A related objective is to fill the wide gulf between the necessarily simplistic elementary treatments in textbooks and the very complex discussions found in the theoretical and empirical measurement literature Here the theoretical results are summarized in an intuitive way and their numerical importance is illustrated using data and results from existing studies Finally while the aim of much of the existing literature is to better understand official price indexes like the Consumer Price Index the emphasis here is more practical to provide the needed tools for individuals to apply these techniques on their own As new datasets become increasingly accessible tools like these will be needed to obtain summary price measures Indeed these techniques have been applied for years in antitrust cases that involve pricing where economic experts typically have access to large granular datasets
