Handbook Of Environment And Waste Management: Air And Water Pollution Control Yung-tse Hung, Lawrence K Wang, Nazih K Shammash, 2012-02-13 The Handbook of Environment and Waste Management Volume 1 Air and Water Pollution Control is a comprehensive compilation of topics that are at the forefront of many technical advances and practices in air and water pollution control These include air pollution control water pollution control water treatment wastewater treatment industrial waste treatment and small scale wastewater treatment Internationally recognized authorities in the field of environment and waste management contribute chapters in their areas of expertise This handbook is an essential source of reference for professionals and researchers in the areas of air water and waste management and as a text for advanced undergraduate and graduate courses in these fields Application of Adsorbents for Water Pollution Control Amit

Bhatnagar, 2012-11-11 Among various water and wastewater treatment technologies the adsorption process is considered better because of lower cost simple design and easy operation Activated carbon a universal adsorbent is generally used for the removal of diverse types of pollutants from water and wastewater Research is now being directed towards the modification of carbon surfaces to enhance its adsorption potential towards specific pollutants However widespread use of commercial activated carbon is sometimes restricted especially in developing or poor countries due to its higher costs Attempts are therefore being made to develop inexpensive adsorbents utilizing abundant natural materials agricultural and industrial waste materials Use of waste materials as low cost adsorbents is attractive due to their contribution in the reduction of costs for waste disposal therefore contributing to environmental protection This e book explores knowledge on recent developments in adsorbents synthesis and their use in water pollution control This handy reference work is intended for researchers and scientists actively engaged in the study of adsorption and the development and application of efficient adsorption technology for water treatment This e book covers a wide range of topics including modeling aspects of adsorption process and the applications of conventional and non conventional adsorbents in water remediation emphasizing sorption mechanisms of different pollutants on the adsorbents Horizons in Bioprocess Engineering Ravindra

Pogaku, 2019-10-12 This book is divided into four parts that outline the use of science and technology for applications pertaining to chemical and bioprocess engineering The book endeavors to help academia researchers and practitioners to use the principles and tools of Chemical and Bioprocess Engineering in a pertinent way while attempting to point out the novel thoughts associated with the brain storming concepts encountered As an example the ability to use case studies appropriately is more important to most practitioners Solid Waste Management and Safe Drinking Water in Context of

Mizoram and Other States in India Rajendra Prasad, 2016-11-20 Water is the most essential commodity for human consumption and one of the most important renewable resources which must be prevented from deterioration in quality and quantity both With rapid growing population and improved living standards the pressure on water resources is increasing

Exploitation of water from the resources for domestic industrial and agricultural purposes puts resources Pollution of surface and subsurface water resources poses a serious threat to human health and environment The surface water sources are largely influenced by anthropogenic activities As most surface water sources are already polluted by rapid urbanization and industrialization its adverse effects on shallow subsurface groundwater aquifers are a cause of concern as large population is depending on it The chemical composition of groundwater is related to the soluble products of rock weathering and decomposition and changes with respect to time and space Some elements are essential in trace amounts for human consumption while higher concentrations of the same can cause toxic effects Water quality depends on local geology distance from sea industrial zone agricultural area and urbanization
