## **Environmental Transformations A Geography Of The Anthropocene:**

**Environmental Transformations** Mark Whitehead, 2014-04-16 From the depths of the oceans to the highest reaches of the atmosphere the human impact on the environment is significant and undeniable These forms of global and local environmental change collectively appear to signal the arrival of a new geological epoch the Anthropocene This is a geological era defined not by natural environmental fluctuations or meteorite impacts but by collective actions of humanity Environmental Transformations offers a concise and accessible introduction to the human practices and systems that sustain the Anthropocene It combines accounts of the carbon cycle global heat balances entropy hydrology forest ecology and pedology with theories of demography war industrial capitalism urban development state theory and behavioural psychology This book charts the particular role of geography and geographers in studying environmental change and its human drivers It provides a review of critical theories that can help to uncover the socio economic and political factors that influence environmental change It also explores key issues in contemporary environmental studies such as resource use water scarcity climate change industrial pollution and deforestation These issues are mapped through a series of geographical case studies to illustrate the particular value of geographical notions of space place and scale in uncovering the complex nature of environmental change in different socio economic political and cultural contexts Finally the book considers the different ways in which nations communities and individuals around the world are adapting to environmental change in the twenty first century Particular attention is given throughout to the uneven geographical opportunities that different communities have to adapt to environmental change and to the questions of social justice this situation raises This book encourages students to engage in the scientific uncertainties that surround the study of environmental change while also discussing both pessimistic and more optimistic views on the ability of humanity to address the environmental challenges of our current era The Soviet Union and Global Environmental Change Jonathan D. Oldfield, 2021-05-26 This book argues that the Soviet Union was a highly influential actor in furthering understandings of society nature interaction on the international stage and played a key role in helping to shape conceptualize and assess the relationship between humankind and the Earth system It considers how humankind s capacity to affect physical and biological systems at a global scale was acknowledged and studied by Soviet scientists discusses how the interaction between Soviet and Western scientists stimulated the development of new technologies and insights which simultaneously facilitated a more profound understanding of the Earth s physical and biological systems and explores how Soviet scientists drew upon pre revolutionary intellectual traditions in order to make sense of society nature interaction and did so in collaboration with a range of international initiatives Overall the book provides a deep analysis of how Soviet scientists conceptualized society nature interaction and influenced the understanding of global physical and biological systems Furthermore it is argued that this intellectual legacy remains of importance today with respect to the activities of Russian science and contemporary global environmental challenges **The Organisation**

**of the Anthropocene** Jorge E. Viñuales, 2018-07-03 In *The Organisation of the Anthropocene* J E Viñuales explores the legal dimensions of the currently advocated new geological epoch called the Anthropocene in which humans are the defining force. He examines in this context two basic propositions: First, law as a technology of social organisation has been neglected in the otherwise highly technology-focused accounts by natural and social scientists of the drivers of the Anthropocene. Secondly, in those rare instances where law has been discussed, there is a tendency to assume that the role of law is to tackle the negative externalities of transactions, e.g. their environmental or social implications, rather than the core of the underlying transactions, i.e. the organisation of production and consumption processes. Such focus on externalities fails to unveil the role of law in prompting, sustaining and potentially managing the processes that have led to the Anthropocene. Hope and Grief in the Anthropocene Lesley Head, 2016-02-22 The Anthropocene is a volatile and potentially catastrophic age demanding new ways of thinking about relations between humans and the nonhuman world. This book explores how responses to environmental challenges are hampered by a grief for a pristine and certain past rather than considering the scale of the necessary socioeconomic change for a future world. Conceptualisations of human nature relations must recognise both human power and its embeddedness within material relations. Hope is a risky and complex process of possibility that carries painful emotions; it is something to be practised rather than felt. As centralised governmental solutions regarding climate change appear insufficient, intellectual and practical resources can be derived from everyday understandings and practices. Empirical examples from rural and urban contexts and with diverse research participants: indigenous communities, climate scientists, weed managers, suburban householders help us to consider capacity, vulnerability and hope in new ways. *Räumliche Transformation* Milad Abassiharofteh, Jessica Baier, Angelina Göb, Insa Thimm, Andreas Eberth, Falco Knaps, Vilja Larjosto, Fabiana Zebner, 2019-09-09 Was kann unter räumlicher Transformation verstanden werden, wie zeigt sie sich und wodurch zeichnen sich Transformationsprozesse eigentlich aus? Dieser Forschungsbericht setzt an diesen Fragen an und stellt aktuelle Forschungsprojekte und Herangehensweisen aus wissenschaftlicher und planungspraktischer Perspektive dar. Ein zentraler Bezugspunkt ist dabei der Begriff der Großen Transformation, der einem Gutachten des Wissenschaftlichen Beirats der Bundesregierung Globale Umweltveränderungen (WBGU) entlehnt ist. Das Gutachten stellt die künftighin notwendig werdenden tiefgreifenden Veränderungen von Wirtschaft und Gesellschaft in Richtung Nachhaltigkeit heraus und beschreibt sie als Große Transformation. Hiernach manifestieren sich gesellschaftliche Umbrüche auch im Raum, sodass raumrelevante Veränderungen als räumliche Transformationen gefasst werden können. Unklar bleibt jedoch, was im Detail unter Prozessen räumlicher Transformation zu verstehen ist und in welchen Erscheinungsformen sie auftreten. Vor dem Hintergrund dieses Forschungsbedarfes widmet sich der Forschungsbericht konkreten Fragestellungen der Erforschung und Gestaltung räumlicher Transformationsprozesse. Ziel ist es, das weitgehend ungeordnete Wissen zu Prozessen der räumlichen Transformation zu systematisieren und einen Beitrag zu einem gemeinsamen Begriffsverständnis zu leisten, das eine

Grundlage für die weitergehende Erforschung und Steuerung dieser Prozesse sein kann **Handbook of Cities and the Environment** Kevin Archer, Kris Bezdecny, 2016-12-30 With an ever growing majority of the world's human population living in city spaces the relationship between cities and nature will be one of the key environmental issues of the 21st Century This book brings together a diverse set of authors to explore the various aspects of this relationship both theoretically and empirically Rather than considering cities as wholly separate from nature a running theme throughout the book is that cities and city dwellers should be characterized as intrinsic in the creation of specifically urban generated socio natures

Borges, 2018-12-07

This book explores the increasing concern over the extent to which those suffering from forced cross border displacement as a result of environmental change are protected under international human rights law Formally they are not entitled to admission or stay in a third state country a situation that has been identified as an international legal protection gap The book seeks to provide answers to two basic questions whether and to what extent existing international law protects cross border environmental displacement and whether and how existing formalized regional complementary protection standards can interpretively solidify and conceptualize protection for cross border environmental displacement The discussion outlines that the protection of the human person is not only an ex post facto obligation of states but must be increasingly seen as an ex ante one The analysis further suggests that the European Union regionally orientated protection regime can help states to consolidate an evolving protection paradigm of proactive and reactive measures being erected at the international level It can also narrow the identified legal protection gaps In so doing it helps states to reconceptualise protection as a holistic and dynamic enterprise This book will be of great interest to academics in law political science and human rights policy makers and civil society organisations both at national and international level **Coping with Global Environmental Change,**
