Environmental Impacts Of Cocoa Production And Processing:

Trends in Sustainable Chocolate Production Charis M. Galanakis, 2022-02-24 Chocolate is consumed by people of all ages in all segments of society throughout the world. However, recent changes in legislative frameworks, environmental concerns, and increasing attention towards sustainability have stimulated the chocolate industry to reconsider their management policy. Current books in the market cover chocolate manufacture without taking into account sustainable practices of production, consumption, and market aspects. *Trends in Sustainable Chocolate Production* fills this knowledge gap by covering all the important aspects of chocolate industry manufacture, functionality, sustainability of the supply chain, commercialization aspects, and market characteristics in one reference. Starting with the health outcomes of chocolate and an overview of its manufacture, the book explores techniques to improve the functionality, flavor, and microstructure of chocolate, as well as its environmental impact through sustainable practices and supply chains. By connecting research to industry and consumer interests, this text aims to support members of the scientific community, professionals, and enterprises working to develop a sustainable chocolate sector.

Appropriate Technologies for Environmental Protection in the Developing World Ernest K. Yanful, 2009-02-19 This book is the first edited compilation of selected refereed papers submitted to ERTEP 2007. The selected papers either dealt with technologies or scientific work and policy findings that address specific environmental problems affecting humanity in general but more specifically people and ecosystems in developing countries. It was not necessary for the work to have been done in a developing country, but the findings and results must be appropriate or applicable to a developing country setting. It is acknowledged that environmental research, technology applications, and policy implementation have been demonstrated to improve environmental sustainability and protection in several developed economies. The main argument of the book is that similar gains can be achieved in developing economies and economies in transition. The book is organized into six chapters along some of the key themes discussed at the conference: Environmental Health Management, Sustainable Energy and Fuel, Water Treatment, Purification, and Protection, Mining and Environment, Soil Stabilization, and Environmental Monitoring. It is hoped that the contents of the book will provide an insight into some of the environmental and health management challenges confronting the developing world and the steps being taken to address them.

True cost accounting for cocoa, coffee, maize, livestock, palm oil, rice, soybeans and wheat Drogo, F.; Ignaciuk, A.; Neves, B.; Ilicic, J., Agrifood systems impose significant environmental, social, and health-related externalities that are not reflected in market prices, contributing to unsustainable development and threatening planetary boundaries. True Cost Accounting (TCA) is an emerging tool for quantifying these hidden costs and informing policy reforms toward more sustainable food systems. This document supports the Food Systems Land Use and Restoration (FOLUR) Impact Program by synthesizing TCA-based evidence for eight key commodities: cocoa, coffee, maize, livestock, palm oil, rice, soy, and wheat. It identifies major externalities such as GHG emissions, biodiversity loss, water and soil degradation, child labor, and insufficient farmer incomes.

and highlights mitigation strategies including agroforestry climate smart practices and organic farming While data availability varies across commodities and regions the evidence suggests that external costs can far exceed market values particularly in livestock and cocoa sectors The findings are intended to support FOLUR country teams and stakeholders in shaping policies for nature positive production and consumption and to inform public communication and advocacy efforts

World Agriculture and the Environment Jason Clay,2013-02-22 World Agriculture and the Environment presents a unique assessment of agricultural commodity production and the environmental problems it causes along with prescriptions for increasing efficiency and reducing damage to natural systems Drawing on his extensive travel and research in agricultural regions around the world and employing statistics from a range of authoritative sources including the United Nations Food and Agriculture Organization the author examines twenty of the world s major crops including beef coffee corn rice rubber shrimp sorghum tea and tobacco For each crop he offers comparative information including a fast facts overview section that summarizes key data for the crop main producing and consuming countries main types of production market trend information and market chain analyses major environmental impacts management strategies and best practices key contacts and references With maps of major commodity production areas worldwide the book represents the first truly global portrait of agricultural production patterns and environmental impacts

Sustainable Agriculture and the Environment Muhammad Farooq,Nirmali Gogoi,Michele Pisante,2023-04-14 Sustainable Agriculture and the Environment describes the relationship of agriculture society nature and the environment sustainable agriculture and sustainable development goals management of biophysical resources for sustainable food and environment traditional knowledge and innovative options and social and policy aspects of sustainable agriculture The book presents both environmental and economic principles helping readers in the development and application of robust policy and good institutional systems that execute on sustainable agriculture practices for a healthy environment and to combat climate resilience Includes case studies that provide real world insights Relates traditional knowledge and innovation maximizing the potential from both Reinforces our understanding of the role of sustainable agriculture in developing environmentally sustainable and profitable food systems

Pesticides in the Modern World Margarita Stoytcheva,2011-10-05 This book is a compilation of 29 chapters focused on pesticides and food production environmental effects of pesticides and pesticides mobility transport and fate The first book section addresses the benefits of the pest control for crop protection and food supply increasing and the associated risks of food contamination The second book section is dedicated to the effects of pesticides on the non target organisms and the environment such as effects involving pollinators effects on nutrient cycling in ecosystems effects on soil erosion structure and fertility effects on water quality and pesticides resistance development The third book section furnishes numerous data contributing to the better understanding of the pesticides mobility transport and fate The addressed in this book issues should attract the public concern to support rational decisions to pesticides use

Abiotic and Biotic Stress in Plants Alexandre De Oliveira,2019-10-23 Plants are subjected to numerous environmental stresses which can be classified into two broad areas abiotic and biotic stresses While the first is considered the damage done to an organism by other living organisms the latter occurs as a result of a negative impact of non living factors on the organisms In this scenario the current most accepted opinion of scientists is that both biotic and abiotic factors in nature and agroecosystems are affected by climate change which may lead to significant crop yield decreases worldwide We should take into consideration not only this environmental concern but also the fact that 20 years from now the earth s population will need 55% more food than it can produce now Therefore it is crucial to address such concerns and bring about possible solutions to future plant stress related outcomes that might affect global agriculture This book intends to provide the reader with a comprehensive overview of both biotic and abiotic stresses through 10 chapters that include case studies and literature reviews about these topics There will be a particular focus on understanding the physiological biochemical and molecular changes observed in stressed plants as well as the mechanisms underlying stress tolerance in plants *Saving Food* Charis M.
