Abstract

Fire is the major hazard which may occur in the automobile industry. There is an increase in accidents and the losses due to fires are

- Loss of human life
- Loss to the life of structure of material
- Loss to property

The fire loads and fire densities were analyzed at Warehouse of Ashok Leyland to find the requirements of firefighting equipments in the industry. There are various methodologies to reduce the fire load in the industry which must be done to reduce the fire risk. The increasing use of engineering solutions needs to identify, characterize and quantify design fires for buildings. The characteristics of fire such as ignition, heat release, and flame temperature of design fires depend on the weight and arrangement of combustible materials. This paper includes the total fire load calculations in various buildings and the locations so that fire loads can be calculated which creates hazards to the environment so that combustible materials can removed and engineered solutions can be given to reduce the fire risk.

Index Terms—Firefighting, Fireload

1. INTRODUCTION

Fire is one of the major cause in the industrial area and there is increasing rates of fire accidents which may kill the life of the people. The fire can cause due to three main components such as Oxygen, Fuel and Heat is also known Fire triangle. When oxygen supply is increased in the fire area the amount of fire burning rate increases so that heat can be generated in huge amount. To suppress the fire one of the components must be removed. The suitable fire extinguishers must be used to suppress the fire triangle so that fire can be easily put off.

To suppress the fire on of the components such as oxygen, Fuel and Heat must be removed so that burning rate of fire will be reduced Fire alarm system is one of the essential needs and must be installed in the building where there is combustible materials present in it. In case of fire, it is very useful to migrate and can be detected easily.

Fire hydrants and fire extinguisher must be installed where there is risk of fire. The suitable fire extinguishers must be kept so that incase of fire it can be easily suppressed. Fire hydrants must be installed outside to suppress the building of fire. Fire hydrants are external fire extinguishers and portable fire extinguishers are internal fire extinguishers

Table 1. Classes of Fires
