This compilation of tutorial articles from JED provides introductory level electronic warfare instruction for students of the discipline. **EW 101** David Adamy, 2001 This popular series of tutorials featured over a period of years in the Journal of Electronic Defense is now available in a single volume. Organized into chapters with new introductory and supplementary material from the author, you get clear, concise and well-illustrated examinations of critical topics such as antenna parameters, receiver sensitivity, processing tasks and search strategies, LPI signals, jamming, communication links and simulation. The chapters define key terms and explain how and why particular technologies are relevant to electronic defense. Detailed charts, diagrams and formulas give you the practical knowledge you need to apply specific techniques in the field. **EW 102** David Adamy, 2004 Serving as a continuation of the bestselling book EW 101 A First Course in Electronic Warfare, this new volume is a second book based on the popular tutorials featured in the Journal of Electronic Defense. Without delving into complex mathematics, this book lets you understand important concepts central to EW so you gain a basic working knowledge of the technologies and techniques deployed in today's EW systems. **Introduction to RF Equipment and System Design** Pekka Eskelinen, 2004 An excellent resource for engineers and technicians alike, this practical design guide offers a comprehensive and easy-to-understand overview of the most important aspects and components of radio frequency equipment and systems. The book applies theoretical fundamentals to real-world issues, heavily relying on examples from recent design projects. Key discussions include system design schemes, circuits and components for system evaluations and design, RF measurement instrumentation, antennas and associated hardware and guidelines for purchasing test equipment. The book also serves as a valuable on-the-job training resource for sales engineers and a graduate-level text for courses in this area.

Fundamentals of Short-range FM Radar Igor V. Komarov, Sergey M. Smolskiy, 2003 Here's a unique new resource that offers you a solid understanding of the fundamental theory, operation principles and applications of short-range frequency modulated continuous wave (FM CW) radar. You learn how to choose the structural scheme of short-range FM radar and determine the optimal algorithm of useful signal processing necessary for ensuring the technical characteristics of radar. Moreover, this practical reference shows you how to ensure the minimum level of radar signal parasitic amplitude, calculate modulation signal distortion and compensate for nonlinear distortion. **Range-Doppler Radar Imaging and Motion Compensation**, **Modern Radar Systems** Hamish Meikle, 2001 This one-of-a-kind book features 536 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two- and three-dimensional functions to help you more accurately analyze radar system performance. The effects of pulse shaping on transmitter stability and spectra are discussed, a topic which is becoming more and more important in the age of electromagnetic compatibility. The book addresses the importance of low attenuation and reflection between the main radio frequency blocks, including the use of

oversized waveguides for long runs *Computer Simulation of Aerial Target Radar Scattering, Recognition, Detection, and Tracking* Yakov D. Shirman, 2002 Here s a ground breaking new book that provides you with the knowledge you need to perform effective computer simulation of scattering for the real targets and conditions of radio wave propagation By replacing field tests with the computer simulation methods presented in this unique resource you save time and money in the early stages of research and development Supplemented with 283 equations and 121 illustrations you get practical guidance in estimating the effect of various signatures of new radar with target recognition evaluating and comparing the effectiveness and complexity of recognition algorithms before they are actually introduced into radar formulating requirements to radar subsystems and evaluating their tolerances and predicting future radar performance What s more the book helps you perform initial simulation of the recognition algorithm in various conditions where the practical receiving of experimental data is restricted Other key discussions include the theory of target recognition results of studying various recognition methods and simulation in radar detection and tracking *Principles of Radar and Sonar Signal Processing* Chevalier François Le, 2002 **Radar System Analysis and Modeling** David K. Barton, 2004-10-01 A thorough update to the Artech House classic *Modern Radar Systems Analysis* this reference is a comprehensive and cohesive introduction to radar systems design and performance estimation It offers you the knowledge you need to specify evaluate or apply radar technology in civilian or military systems The book presents accurate detection range equations that let you realistically estimate radar performance in a variety of practical situations With its clear easy to understand language you quickly learn the tradeoffs between choice of wavelength and radar performance and see the inherent advantages and limitations associated with each radar band You find modeling procedures to help you analyze enemy systems or evaluate radar integrated into new weapon systems The book covers ECM and ECCM for both surveillance and tracking to help you estimate the effects of active and passive ECM select hardware software for reconnaissance or jamming and plan the operation of EW systems As radar systems evolve this book provides the equations needed to calculate and evaluate the performance of the latest advances in radar technology **Tactical Communications for the Digitized Battlefield** Michael J. Ryan, Michael R. Frater, 2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and

shows how its subsystems can be integrated to form a single logical network

Target Acquisition in Communication Electronic Warfare Systems Richard Poisel, 2003-12-01 Radio communications plays an increasingly critical and growing role in today's electronic battlefield. Because more and more radio signals are deployed in electronic warfare (EW) situations, determining which ones are friendly and which are enemy has become more difficult and crucial. This book arms defense systems designers and operators with the full array of traditional search mechanisms and advanced high resolution techniques for targeting radio signals deployed in electronic warfare. An invaluable technical reference, the book helps professionals fully understand the tradeoffs involved in designing EW target acquisition systems with less time and effort. Moreover, practitioners learn how to establish optimum methods for acquiring communication targets for exploitation or countermeasures. The book also serves as an excellent text for graduate courses in electronic warfare.

Introduction to Communication Electronic Warfare Systems Richard Poisel, 2002 This comprehensive engineering level resource provides an introduction to electronic warfare (EW) for communication systems. Extensively referenced with over 600 equations, it details the components, systems, and operations of electronic warfare systems dedicated to protecting and attacking military communications networks. The volume provides a complete understanding of how modern direction finders for communication signals work along with their limitations. The book also helps the reader acquire a working knowledge of hyperbolic emitter location technologies and shows how to measure performance. Defining the basic operations necessary for communication EW systems.

Beyond the Kalman Filter: Particle Filters for Tracking Applications Branko Ristic, Sanjeev Arulampalam, Neil Gordon, 2003-12-01 For most tracking applications, the Kalman filter is reliable and efficient, but it is limited to a relatively restricted class of linear Gaussian problems. To solve problems beyond this restricted class, particle filters are proving to be dependable methods for stochastic dynamic estimation. Packed with 867 equations, this cutting edge book introduces the latest advances in particle filter theory, discusses their relevance to defense surveillance systems, and examines defense related applications of particle filters to nonlinear and non-Gaussian problems. With this hands-on guide, you can develop more accurate and reliable nonlinear filter designs and more precisely predict the performance of these designs. You can also apply particle filters to tracking a ballistic object, detection and tracking of stealthy targets, tracking through the blind Doppler zone, bistatic radar tracking, passive ranging, bearings only tracking of maneuvering targets, range only tracking, terrain aided tracking of ground vehicles, and group and extended object tracking.

Mathematical Techniques in Multisensor Data Fusion David Lee Hall, Sonya A. H.
