It was written to support the work of students in an educational leadership doctoral program but it will also assist the research efforts of college students at any level in any discipline. The book begins by establishing the underlying philosophical concepts upon which all good research is based, preparing students to get down to the nuts and bolts of conducting their own research and evaluating the research of others. Fundamental concepts and rules of research are explained both for producers and consumers of social science and educational research. Numerous practical examples illustrate the steps in the research process presented in the text. There are end of chapter exercises for students to apply the concepts discussed in the chapter. Templates for organizing and presenting research provide students with a game plan for success with their research. The book ends with an up to date annotated bibliography of beginning and advanced research texts, allowing students easy access to books that detail the more specialized research topics. While most research books detail one or more method in depth, this text provides a broad introduction to many techniques and models used in doctoral dissertations and will be of particular value to those who are consumers of inquiry studies and research reports.
