Adsorption, Ion Exchange and Catalysis Stavros G. Pouloupoulos, Vassilis J. Inglezakis, 2006-08-23 Adsorption Ion Exchange and Catalysis is essentially a mixture of environmental science and chemical reactor engineering More specifically three important heterogeneous processes namely adsorption ion exchange and catalysis are analysed from fundamental kinetics to reactor design with emphasis on their environmental applications In Chapter 1 the subject of air and water pollution is dealt with Data about pollutants and emission sources are given and the treatment methods are shortly presented In Chapter 2 the very basics and historical development of adsorption ion exchange and catalysis are presented as well as their environmental applications Chapter 3 is devoted to heterogeneous processes and reactor analysis All types of reactors are described in depth and reactor modelling hydraulics and mass heat transfer phenomena are examined for each type of reactor Chapters 4 and 5 are dedicated to adsorption ion exchange and catalysis respectively The basic principles are presented including kinetics equilibrium mass heat transfer phenomena as well as the analytical solutions of the reactor models presented in Chapter 3 In the sixth chapter the subject of scale up is approached The two Annexes at the end of the book contain physical properties of substances of environmental interest as well as unit conversion tables Finally nearly all the examples contained are based on real experimental data found in literature with environmental interest Most of the examples consider all aspects of operation design kinetics hydraulics and mass transfer Provides basic knowledge of major environmental problems and connects them to chemical engineering

Environment and Development Stavros G. Pouloupoulos, Vassilis J. Inglezakis, 2016-05-23 Environment and Development Basic Principles Human Activities and Environmental Implications focuses on the adverse impact that human activities developments and economic growth have on both natural and inhabited environments The book presents the associated problems along with solutions that can be used to achieve a harmonic sustainable development that provides for the co existence of man and natural life Chapters provide detailed information on a range of environments including atmospheric aquatic soil natural urban energy and extraterrestrial as well as the relationship between the environment and development In addition this comprehensive book presents the latest research findings and trends in global environmental policy for each issue Offers a discussion of the extraterrestrial environment and waste in earth orbit as one of the distinctive topics of the book Addresses global environmental policy issues and policies Presents tabulated data to support the analysis and explain the issues presented Includes case studies covering many topics of current interest Analyzes environmental issues and proposes solutions grounded in recent research findings Discusses the various interpretations of the development concept as well as alternative pathways to sustainable development
