- It is the combination of solar power generating system and wind power generating system and forming a new hybrid concept which is known as "hybrid wind-solar power generation system".
- Here The solar panels are mounted on the towers of the windmill such that it remains at a certain height from the ground but is the direction of direct sunlight.
- In this structure the solar panels are connected to a servo motor which is connected to a embedded system.
- The system is embedded in such a way that the solar panels rotate with the movement of the sun.
- Thus from the sunrise till the sunsets total energy of the sun can be totally concentrated on the solar panel.
- Thus the system is utilized for generation throughout the day.
