Sauter, 2019-01-11 In *The Spatial Reformation* Michael J Sauter offers a sweeping history of the way Europeans conceived of three dimensional space including the relationship between Earth and the heavens between 1350 and 1850 He argues that this spatial reformation provoked a reorganization of knowledge in the West that was arguably as important as the religious Reformation Notably it had its own sacred text which proved as central and was as ubiquitously embraced Euclid s *Elements* Aside from the Bible no other work was so frequently reproduced in the early modern era According to Sauter its penetration and suffusion throughout European thought and experience call for a deliberate reconsideration not only of what constitutes the intellectual foundation of the early modern era but also of its temporal range *The Spatial Reformation* contends that space is a human construct that is it is a concept that arises from the human imagination and gets expressed physically in texts and material objects Sauter begins his

examination by demonstrating how Euclidean geometry when it was applied fully to the cosmos estranged God from man enabling the breakthrough to heliocentrism and by extension the discovery of the New World Subsequent chapters provide detailed analyses of the construction of celestial and terrestrial globes Albrecht Dürer's engraving Melencolia the secularization of the natural history of the earth and man and Hobbes's rejection of Euclid's sense of space and its effect on his political theory Sauter's exploration culminates in the formation of a new anthropology in the eighteenth century that situated humanity in reference to spaces and places that human eyes had not actually seen The Spatial Reformation illustrates how these disparate advancements can be viewed as resulting expressly from early modernity's embrace of Euclidean geometry

The Rise of the Modernist Bookshop Huw Osborne, 2016-03-09 The trade in books has always been and remains an ambiguous commercial activity associated as it is with literature and the exchange of ideas This collection is concerned with the cultural and economic roles of independent bookstores and it considers how eight shops founded during the modernist era provided distinctive spaces of literary production that exceeded and yet never escaped their commercial functions As the contributors show these booksellers were essential institutional players in literary networks When the eight shops examined first opened their doors their relevance to literary and commercial life was taken for granted In our current context of box stores online shopping and ebooks we no longer encounter the book as we did as recently as twenty years ago By contributing to our understanding of bookshops as unique social spaces on the thresholds of commerce and culture this volume helps to lay the groundwork for comprehending how our relationship to books and literature has been and will be affected by the physical changes to the reading experience taking place in the twenty first century

Molecular Origins of Brain and Body Geometry Antonio Lima-de-Faria, 2014-10-07 New concepts arise in science when apparently unrelated fields of knowledge are put together in a coherent way The recent results in molecular biology allow to explain the emergence of body patterns in animals that before could not be understood by zoologists There are no fancy curiosities in nature Every pattern is a product of a molecular cascade originating in genes and a living organism arises from the collaboration of these genes with the outer physical environment Tropical fishes are as startling in their colors and geometric circles as peacocks Tortoises are covered with the most regular triangles squares and concentric circles that can be green brown or yellow Parallel scarlet bands are placed side by side of black ones along the body of snakes Zebras and giraffes have patterns which are lessons in geometry with their transversal and longitudinal stripes their circles and other geometric figures Monkeys like the mandrills have a spectacularly colored face scarlet nose with blue parallel flanges and yellow beard All this geometry turns out to be highly molecular The genes are many and have been DNA sequenced Besides they not only deal with the coloration of the body but with the development of the brain and the embryonic process A precise scenario of molecular events unravels in the vertebrates It may seem far fetched but the search for the origin of this geometry made it mandatory to study the evolution of matter and the origin of the brain It turned out that matter from its onset is pervaded by

geometry and that the brain is also a prisoner of this ordered construction Moreover the brain is capable of altering the body geometry and the geometry of the environment changes the brain Nothing spectacular occurred when the brain arrived in evolution Not only it came after the eye which had already established itself long ago but it had a modest origin It started from sensory cells on the skin that later aggregated into clusters of neurons that formed ganglia It also became evident that pigment cells that decide the establishment of the body pattern originate from the same cell population as neurons the neural crest cells This is a most revealing result because it throws light on the power that the brain has to rapidly redirect the coloration of the body and to change its pattern Recent experiments demonstrate how the brain changes the body geometry at will and within seconds an event that could be hardly conceived earlier Moreover this change is not accidental it is related to the surrounding environment and is also used as a mating strategy Chameleons know how to do it as well as flat fishes and octopuses No one would have dared to think that the brain had its own geometry How could the external geometry of solids or other figures of our environment be apprehended by neurons if these had no architecture of their own Astonishing was that the so called simple cells in the neurons of the primary visual cortex responded to a bar of light with an axis of orientation that corresponded to the axis of the cell s receptive field We tend to consider our brain a reliable organ But how reliable is it From the beginning the brain is obliged to transform reality Brain imagery involves form color motion and sleep Unintentionally these results led to unexpected philosophical implications Plato s pivotal concept that forms exist independently of the material world is reversed Atoms have been considered to be imaginary for 2 000 years but at present they can be photographed one by one with electron microscopes The reason why geometry has led the way in this inquiry is due to the fact that where there is geometry there is utter simplicity coupled to rigorous order that underlies the phenomenon where it is recognized Order allows variation but imposes at the same time a canalization that is patent in what we call evolution

The Message of the City Patricia E. Palermo,2016-05-27 Dawn Powell was a gifted satirist who moved in the same circles as Dorothy Parker Ernest Hemingway renowned editor Maxwell Perkins and other midcentury New York luminaries Her many novels are typically divided into two groups those dealing with her native Ohio and those set

in New York From the moment she left behind her harsh upbringing in Mount Gilead Ohio and arrived in Manhattan in 1918 she dove into city life with an outlander's anthropological zeal reads a recent New Yorker piece about Powell and it is those New York novels that built her reputation for scouring wit and social observation In this critical biography and study of the New York novels Patricia Palermo reminds us how Powell earned a place in the national literary establishment and East Coast social scene Though Powell's prolific output has been out of print for most of the past few decades a revival is under way the Library of America touting her as a rediscovered American comic genius released her collected novels and in 2015 she was posthumously inducted into the New York State Writer's Hall of Fame Engaging and erudite *The Message of the City* fills a major gap in the story of a long overlooked literary great Palermo places Powell in cultural and historical context and drawing on her diaries reveals the real life inspirations for some of her most delicious satire **Illustrated History of South Africa** Dougie Oakes,1992 This updated version of the 1988 edition strips away the curtain of myths and misconceptions that surround South Africa Much has happened and is still happening in this troubled land so to better understand the events of recent years the final two chapters have been revised and three new chapters have been added 1 000 color photos maps and illustrations **Genre Imagery in Early Modern Northern Europe** ArthurJ. DiFuria,2017-07-05 Exploring the rich variety of pictorial rhetoric in early modern northern European genre images this volume deepens our understanding of genre's place in early modern visual culture From 1500 to 1700 artists in northern Europe pioneered the category of pictures now known as genre portrayals of people in ostensibly quotidian situations Critical approaches to genre images have moved past the antiquated notion that they portray uncomplicated slices of life describing them instead as heavily encoded pictorial essays laden with symbols that only the most erudite contemporary viewers and modern iconographers could fully comprehend These essays challenge that limiting binary revealing a more expansive array of accessible meanings in genre's deft grafting of everyday scenarios with a rich complex of experiential cultural political and religious references Authors deploy a variety of approaches to detail genre's multivalent relations to older more established pictorial and literary categories the interplay between the meaning of the everyday and its translation into images and the multifaceted concerns genre addressed for its rapidly expanding unprecedentedly diverse audience **George Bush** Judith T.
