adopting a techno financial approach to working capital management In the previous edition a full chapter on Service Business Risk Analysis and Working Capital Assessment was introduced to understand the nature of service business and the risks associated with it followed by developing a model for assessment of working capital requirement Whereas in the Fourth Edition a new chapter on Technological Progress Innovations and Startups A New Financing Methodology has been introduced to fill a long felt gap in financing of emerging industries Besides the book is revised and updated extensively by incorporating the current researches in the field particular mention can be made of Cash pooling system Bullwhip effect and newer approaches to inventory recording system Throughout the book every concept is presented with worked out examples and case studies for easy comprehension of the subject The book is primarily addressed to postgraduate students majoring in Finance and to those pursuing professional courses in Accounts CA and Cost Accounting ICWA The book will also be very useful for practising finance executives risk managers and also purchase materials managers
