Precision Farming In Horticulture Jitendar Singh, 2013-01-01 Climatic variations often tend to have adverse effect on the yield and production of crops. Efforts have therefore been on for harnessing this natural resource through artificial means for increasing crop productivity. One such technology is protected cultivation. This technique is well adopted in Europe and USA and now China and Japan are leading in controlled sphere production of horticultural crops. In India the technology is making breakthrough in Karnataka and Maharashtra in protected cultivation of pepper, tomato, cucumber, muskmelon, baby corn etc. Precision farming is defined as the cultivation by adopting technologies which give maximum precision in production of a superior crop with a desired yield levels and quality at competitive production. These include use of genetically modified crop varieties, micropropagation, integrated nutrient water and pest managements, protected cultivation, organic farming, hi tech horticulture and post harvest technology. Post harvest sector needs lot of precision. Peels, rags etc go waste. Many times peels being rich in polyphenols, colouring pigment, nutrients etc are richer in antioxidant than what we actually eat. Here we need precision. Precision in management, precision in product diversification, precision in value addition are much sought after aspect.

Organic Farming for Sustainable Horticulture P. Parvatha Reddy,2012-06-01 Horticulture is fast emerging as a major commercial venture because of higher remuneration per unit area and the realization that consumption of fruits and vegetables is essential for health and nutrition In the last one decade export potential of horticultural crops has significantly increased attracting even multinationals into floriculture processing and value added products Since the horticultural produce especially fruits and vegetables are consumed afresh consumers expect residue free produce In modern society where consumers are becoming increasingly health conscious and environmentally aware a major market for organic foods has developed The organic sector in particular has sprung back into life to become one of the most dynamic sectors in the

international food market The present book is an attempt which comprehensively deals with both principles and practices It is divided into two parts The first part deals with the principles of organic farming covering aspects such as enrichment of soil with organic matter cropping systems bio fertilizers weed management and pest management The second part of the book deals with package of practice for organic farming in fruits vegetables ornamentals medicinal aromatic plantation spice and tuber crops Three aspects namely nutrient management weed management and pest management are dealt with separately for each crop An entire chapter is devoted for sources of critical inputs used for organic farming which would be very much useful to the organic farmers to procure the same This book is a practical guide to practicing organic farmers of horticulture crops Further it is a useful reference to policy makers research workers and students The material can also be used for teaching undergraduate and post graduate courses
