Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer  
Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics  
STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are  
generally required to publish their work LaTeX has become an integral part of today s publishing workflow On the other hand  
modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing  
LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases  
Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone  
manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and  
comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides  
an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS  
syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAsT Third the thesis  
provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an  
automatic verification of equations in digital mathematical libraries This is an open access book     Programming Logics

contains 17 papers from colleagues all over the world and covers all the fields to which Harald Ganzinger dedicated his work  
during his academic career The volume begins with a complete account of Harald Ganzinger s work and then turns its focus  
to the research of his former colleagues students and friends who pay tribute to him through their writing Their individual  
papers span a broad range of topics including programming language semantics analysis and verification first order and  
higher order theorem proving unification theory non classical logics reasoning modulo theories and applications of

comprehensive coverage of causal analysis in many sciences including recent advances using graphical methods Pearl presents a unified account of the probabilistic manipulative counterfactual and structural approaches to causation and devises simple mathematical tools for analyzing the relationships between causal connections statistical associations actions and observations The book will open the way for including causal analysis in the standard curriculum of statistics artificial intelligence
