Automating the News Nicholas Diakopoulos,2019-06-10 From hidden connections in big data to bots spreading fake news journalism is increasingly computer generated An expert in computer science and media explains the present and future of a world in which news is created by algorithm Amid the push for self driving cars and the roboticization of industrial economies automation has proven one of the biggest news stories of our time Yet the wide scale automation of the news itself has largely escaped attention In this lively expos of that rapidly shifting terrain Nicholas Diakopoulos focuses on the people who tell the stories increasingly with the help of computer algorithms that are fundamentally changing the creation dissemination and reception of the news Diakopoulos reveals how machine learning and data mining have transformed investigative journalism Newsbots converse with social media audiences distributing stories and receiving feedback Online media has become a platform for A B testing of content helping journalists to better understand what moves audiences Algorithms can even draft certain kinds of stories These techniques enable media organizations to take advantage of experiments and economies of scale enhancing the sustainability of the fourth estate But they also place pressure on editorial

decision making because they allow journalists to produce more stories sometimes better ones but rarely both Automating the News responds to hype and fears surrounding journalistic algorithms by exploring the human influence embedded in automation Though the effects of automation are deep Diakopoulos shows that journalists are at little risk of being displaced With algorithms at their fingertips they may work differently and tell different stories than they otherwise would but their values remain the driving force behind the news The human algorithm hybrid thus emerges as the latest embodiment of an age old tension between commercial imperatives and journalistic principles

Enhancing Citizens' Role in Public Safety Jasmin Haunschild, 2025-07-01 The COVID 19 pandemic and the war in Ukraine emphasize the need for greater disaster resilience and preparedness This book investigates how these apps can enhance crisis awareness and citizen involvement in disaster prevention and response By examining user perspectives and the impact of crisis experiences the book explores how to increase the adoption and effectiveness of warning apps The research uses qualitative and quantitative methods including surveys and design interventions to reveal current usage changes over time and desired features It shows that while citizens find warning apps helpful more safety related features and two way communication could increase their appeal Additionally the integration of preparedness features into these apps can increase their perceived usefulness though challenges remain in addressing user expectations and design preferences across different crises and cultural contexts

A Methodology for

Developing Multimodal User Interfaces of Information Systems Adrian Stanculescu, 2008 The Graphical User Interface GUI as the most prevailing type of User Interface UI in today's interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e.g. with limited literacy or typing skills in some circumstances e.g. while moving around with their hands or eyes busy or when the environment is constrained e.g. the keyboard and the mouse are not available In order to go beyond the GUI constraints the Multimodal MM UIs appear as a paradigm that provides users with great expressive power naturalness and flexibility In this thesis we argue that developing MM UIs combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method Therefore we define a design space based method that is supported by model to model colored transformations in order to obtain MM UIs of information systems The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage In addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions *Synergizing Data Envelopment Analysis and Machine Learning for Performance Optimization in Healthcare* Ajibesin, Adeyemi Abel, G., Naveen Sundar, Thangavel, Senthil Kumar, 2025-05-02 Healthcare systems face the challenge of delivering high quality care while efficiently managing costs and resources Traditional methods of performance evaluation often fall short when addressing the complex and diverse nature of healthcare operations Data envelopment analysis DEA has been used to measure the efficiency of healthcare providers but its linear deterministic nature limits its adaptability to dynamic environments In contrast machine learning ML can handle complex non linear relationships and high dimensional data offering deeper insights and predictive capabilities The synergy between DEA and ML presents an opportunity to overcome these limitations and drive more effective performance optimization It leads to efficiency assessments through predictive analytics and improved resource allocation with data driven insights and optimizing clinical pathways and decision support systems for better patient outcomes *Synergizing Data Envelopment Analysis and Machine Learning for Performance Optimization in Healthcare* explores the integration of DEA and ML to enhance performance optimization in healthcare improving efficiency care quality and resource management It examines theoretical foundations methodological innovations and practical applications providing a comprehensive resource with a key focus on development of algorithms to address challenges in healthcare optimization Covering topics such as healthcare equipment manufacturing human augmentation and robotic surgery this book is an excellent resource for hospital administrators clinical managers clinical decision makers policymakers public health officials professionals researchers scholars academics and more *Computational Science and Technology* Rayner Alfred, Yuto Lim, Ag Asri Ag Ibrahim, Patricia Anthony, 2018-08-27 This book features the proceedings of the Fifth International

Conference on Computational Science and Technology 2018 ICCST2018 held in Kota Kinabalu Malaysia on 29 30 August 2018 Of interest to practitioners and researchers it presents exciting advances in computational techniques and solutions in this area It also identifies emerging issues to help shape future research directions and enable industrial users to apply cutting edge large scale and high performance computational methods Encounters with HCI Pioneers Ben Shneiderman,2022-05-31 The huge success of personal computing technologies has brought astonishing benefits to individuals families communities businesses and government transforming human life largely for the better These democratizing transformations happened because a small group of researchers saw the opportunities to convert sophisticated computational tools into appealing personal devices offering valued services by way of easy to use interfaces Along the way there were challenges to their agenda of human centered design by 1 traditional computer scientists who were focused on computation rather than people oriented services and 2 those who sought to build anthropomorphic agents or robots based on excessively autonomous scenarios The easy to learn and easy to use interfaces based on direct manipulation became the dominant form of interaction for more than six billion people This book gives my personal history of the intellectual arguments and the key personalities I encountered I believe that the lessons of how the discipline of Human Computer Interaction HCI and the profession of User Experience Design UXD were launched can guide others in forming new disciplines and professions The stories and photos of the 60 HCI pioneers engaged in discussions and presentations capture the human drama of collaboration and competition that invigorated the encounters among these bold creative generous and impassioned individuals
