Virtual Interaction: Interaction in Virtual Inhabited 3D Worlds E. Granum,Lars Qvortrup,B. Holmqvist,S. Kolstrup,K. Halskov Madsen,2013-03-09 Lars Qvortrup The world of interactive 3D multimedia is a cross institutional world Here researchers from media studies linguistics dramaturgy media technology 3D modelling robotics computer science sociology etc etc meet In order not to create a new tower of Babel it is important to develop a set of common concepts and references This is the aim of the first section of the book In Chapter 2 Jens F Jensen identifies the roots of interaction and interactivity in media studies literature studies and computer science and presents definitions of interaction as something going on among agents and agents and objects and of interactivity as a property of media supporting interaction Similarly he makes a classification of human users avatars autonomous agents and objects demonstrating that no universal differences can be made We are dealing with a continuum While Jensen approaches these categories from a semiotic point of view in Chapter 3 Peer Mylov discusses similar issues from a psychological point of view Seen from the user s perspective a basic difference is that between stage and back stage or rather front stage i e between the real I and we and the virtual representational I and we Focusing on the computer as a stage in Chapter 4 Kjölner and Lehmann use the theatre metaphor to conceptualize the stage phenomena and the relationship between stage and front stage

Interactive Multimedia Learning Environments Max Giardina,2012-12-06 Multimedia environments suggest to us a new perception of the state of changes in and the integration of new technologies that can increase our ability to process information Moreover they are obliging us to change our idea of knowledge These changes are reflected in the obvious synergetic convergence of different types of access communication and information exchange The multimedia learning environment should not represent a passive object that only contains or assembles information but should become on one side the communication medium of the pedagogical intentions of the professor designer and on the other side the place where the learner reflects and where he or she can play with test and access information and try to interpret it manipulate it and build new knowledge The situation created by such a new learning environments that give new powers to individuals particularly with regard to accessing and handling diversified dimensions of information is becoming increasingly prevalent in the field of education The old static equilibrium in which fixed roles are played by the teacher including the teaching environment and the learner is shifting to dynamic equilibrium where the nature of information and its processing change depending on the situation the learning context and the individual s needs

Diagrams Michael Anderson, Peter Cheng, Volker Haarslev, 2003-07-31 Diagrams 2000 is dedicated to the memory of Jon Barwise. Diagrams 2000 was the first event in a new interdisciplinary conference series on the Theory and Application of Diagrams. It was held at the University of Edinburgh, Scotland, September 1-3, 2000. Driven by the pervasiveness of diagrams in human communication and by the increasing availability of graphical environments in computerized work, the study of diagrammatic notations is emerging as a research field in its own right. This development has simultaneously taken place in several scientific disciplines including, amongst others, cognitive science, artificial intelligence, and computer science. Consequently, a number of different workshop series on this topic have been successfully organized during the last few years: Thinking with Diagrams, Theory of Visual Languages, Reasoning with Diagrammatic Representations, and Formalizing Reasoning with Visual and Diagrammatic Representations. Diagrams are simultaneously complex cognitive phenomena and sophisticated computational artifacts. So to be successful and relevant, the study of diagrams must as a whole be interdisciplinary in nature. Thus, the workshop series mentioned above decided to merge into Diagrams 2000 as the single interdisciplinary conference for this exciting new field. It is intended that Diagrams 2000 should become the premier international conference series in this area and provide a forum with sufficient breadth of scope to encompass researchers from all academic areas who are studying the nature of diagrammatic representations and their use by humans and in machines.

Designing Interactive Speech Systems Niels O. Bernsen, Hans Dybkjaer, Laila Dybkjaer, 2012-12-06

Designing Interactive Speech Systems describes the design and implementation of spoken language dialogue within the context of SLDS (spoken language dialogue systems) development. Using an applications-oriented SLDS developed through the Danish Dialogue project, the authors describe the complete process involved in designing such a system and, in doing so, present several innovative practical tools such as dialogue design guidelines, in-depth evaluation methodologies, and speech functionality analysis. The approach taken is firmly applications-oriented, describing the results of research applicable to industry and showing how the development of advanced applications drives research rather than the other way around. All those working on the research and development of spoken language services, especially in the area of telecommunications, will benefit from reading this book.

Handbook of Internet and Multimedia Systems and Applications Borko Furht, 1998-12-29

Today, multimedia applications on the Internet are still in their infancy. They include personalized communications such as Internet telephone and videophone, and interactive applications such as video on demand, videoconferencing, distance learning, collaborative work, digital libraries, radio, and television broadcasting, and others. Handbook of Internet and Multimedia Systems and Applications is a companion to the author's Handbook of Multimedia Computing, which probes the development of systems supporting Internet and multimedia applications. Part one introduces basic multimedia and Internet concepts, user interfaces, standards, authoring techniques, and tools, and video browsing and retrieval techniques. Part two covers multimedia and communications systems, including distributed multimedia systems, visual
