**Designs and Their Codes** E. F. Assmus, J. D. Key, 1994-01-06 A self contained account suited for a wide audience describing coding theory combinatorial designs and their relations

**Designs From Linear Codes** Cunsheng Ding, 2018-08-24 This monograph aims to provide a well rounded and detailed account of designs using linear codes Most chapters of this monograph cover on the designs of linear codes A few chapters deal with designs obtained from linear codes in other ways Connections among ovals hyperovals maximal arcs ovoids linear codes and designs are also investigated This book consists of both classical results on designs from linear codes and recent results yet published by others This monograph is intended to be a reference for postgraduates and researchers who work on combinatorics or coding theory or digital communications or finite geometry

**Classification Algorithms for Codes and Designs** Petteri Kaski, Patric R.J. Östergård, 2006-02-03 A new starting point and a new method are requisite to insure a complete classification of the Steiner triple systems of order 15 This method was furnished and its tedious and difficult execution undertaken by Mr Cole F N Cole L D Cummings and H S White 1917 129 The history of classifying combinatorial objects is as old as the history of the objects themselves In the mid 19th century Kirkman Steiner and others became the fathers of modern combinatorics and their work on various objects including what became later known as Steiner triple systems led to several classification results Almost a century earlier in 1782 Euler 180 published some results on classifying small Latin squares but for the first few steps in this direction one should actually go at least as far back as ancient Greece and the proof that there are exactly five Platonic solids One of the most remarkable achievements in the early pre computer era is the classification of the Steiner triple systems of order 15 quoted above An onerous task that today no sensible person would attempt by hand calculation Because with the exception of occasional parameters for which combinatorial arguments are effective often to prove nonexistence or uniqueness classification in general is about algorithms and computation

**Codes and Designs** K. T. Arasu, Akos Seress, 2008-08-22 Following an initiative of the late Hans Zassenhaus in 1965 the Departments of Mathematics at The Ohio State University and Denison University organize conferences in combinatorics group theory and ring theory Between May 18 21 2000 the 25th conference of this series was held Usually there are twenty to thirty invited 20 minute talks in each of the three main areas However at the 2000 meeting the combinatorics part of the conference was extended to honor the 65th birthday of Professor Dijen Ray Chaudhuri This volume is the proceedings of this extension Most of the papers are in coding theory and design theory reflecting the major interest of Professor Ray Chaudhuri but there are articles on association schemes algebraic graph theory combinatorial geometry and network flows as well There are four surveys and seventeen research articles and all of these went through a thorough refereeing process The volume is primarily recommended for researchers and graduate students interested in new

**Codes From Difference Sets** Cunsheng Ding, 2014-08-08 This is the first monograph on codebooks and linear codes from difference sets and almost difference sets It aims at providing a survey of constructions of difference sets and almost difference sets as well as an in depth treatment of codebooks and linear codes from difference sets and almost difference sets To be self contained this monograph covers necessary mathematical foundations and the basics of coding theory It also contains tables of best BCH codes and best cyclic codes over GF 2 and GF 3 up to length 125 and 79 respectively This repository of tables can be used to benchmark newly constructed cyclic codes This monograph is intended to be a reference for postgraduates and researchers who work on combinatorics or coding theory or digital communications      The Codes Guidebook for Interiors Katherine E. Kennon, Sharon K. Harmon, 2022-01-19 THE INTERIOR CODES AND STANDARDS REFERENCE OF CHOICE FOR DESIGNERS AND ARCHITECTS UPDATED FOR THE 2018 AND 2021 CODES If you are involved with the design or management of buildings and spaces it is important to remain up to date on the ever evolving codes and standards that keep communities safe With over 80 000 copies sold The Codes Guidebook for Interiors continues to provide comprehensive explanations of the major codes and standards applicable to commercial and residential interior projects The easily navigable format gives clear perspective to how these often confusing concepts and requirements are integrated into real world practice helping designers incorporate the relevant standards into their projects Updated with the most recent changes and insights to the codes and standards of the ICC NFPA ANSI ADA and other standards the Eighth Edition provides unparalleled and integrated guidance on building safety accessibility sustainability energy efficiency and more Updates to the Eighth Edition include Explanations of code requirements highlighting the latest changes in the 2018 and 2021 ICC codes including the International Building Code and the NFPA s Life Safety Code Clarifications to how and when the ADA ABA and the ICC ANSI accessibility requirements will apply to a project Introduction to the codes and standards that address sustainability in typical projects In depth examinations of fire and smoke resistant assemblies fire
