Wind Power Politics and Policy Scott Victor Valentine, 2014-10-30 The wind power development policy community faces a conundrum On the one hand as the most commercially viable form of utility scale renewable energy the wind power industry

has experienced in excess of ten fold growth in total installed capacity over the past decade On the other hand installed wind power capacity still accounts for less than 2% of global electricity generation capacity despite the prevalence of studies indicating that in certain situations wind power can be a cheaper form of electricity than most fossil fuel alternatives Accordingly the most puzzling aspect of wind power development policy can be summed up in the following manner given the global imperative to facilitate an expedient transition away from CO2 intensive energy technologies and the commercial viability of wind power what is stopping the wind power industry from capturing higher market shares around the world In *Wind Power Politics and Policy* Scott Valentine examines this question from two angles First it presents an analysis of social technical economic and political STEP barriers which research shows tends to stymie wind power development Case studies which examine phlegmatic wind power development in Japan Taiwan Australia and Canada are presented in order to demonstrate to the reader how these barriers manifest themselves in practice Second the book presents an analysis of STEP catalysts which have been linked to successful growth of wind power capacity in select nations Four more case studies that examine the successful development of wind power in Denmark Germany the USA and China are put forth as practical examples of how supportive factors conflate to produce conditions that are conducive to growth of wind power markets By examining its impediments and catalysts the book will provide policymakers with insight into the types of factors that must be effectively managed in order to maximize wind power development *The Whole Building Handbook* Varis

Bokalders,Maria Block,2010-02-09 *The Whole Building Handbook* is a compendium of all the issues and strategies that architects need to understand to design and construct sustainable buildings for a sustainable society The authors move beyond the current definition of sustainability in architecture which tends to focus on energy efficiency to include guidance for architecture that promotes social cohesion personal health renewable energy sources water and waste recycling systems permaculture energy conservation and crucially buildings in relation to their place The authors offer a holistic approach to sustainable architecture and authoritative technical advice on How to design and construct healthy buildings through choosing suitable materials healthy service systems and designing a healthy and comfortable indoor climate including solutions for avoiding problems with moisture radon and noise as well as how to facilitate cleaning and maintenance How to design and construct buildings that use resources efficiently where heating and cooling needs and electricity use is minimized and water saving technologies and garbage recycling technologies are used How to close organic waste sewage heat and energy cycles For example how to design a sewage system that recycles nutrients Includes a section on adaptation of buildings to local conditions looking at how a site must be studied with respect to nature climate and community structure as well as human activities The result is a comprehensive thoroughly illustrated and carefully structured textbook and reference *Infrastructure Development - Theory, Practice and Policy* Rachna Gangwar,Astha Agarwalla,Sandhya

Sreekumar,2022-05-29 This compendium presents the papers presented in the conference *Infrastructure Development*

Theory Practice and Policy held on 29th and 30th April 2021 It brings together the select papers from the conference and other contributions from experts and researchers The compendium puts together the research under various themes and we hope that the theoretical findings will impact the practice and policy in the future as well as pave the way for future research in the direction of achieving more efficient and more humane infrastructure
