Clinical Prediction Models Ewout W. Steyerberg,2019-07-22 The second edition of this volume provides insight and practical illustrations on how modern statistical concepts and regression methods can be applied in medical prediction problems including diagnostic and prognostic outcomes Many advances have been made in statistical approaches towards outcome prediction but a sensible strategy is needed for model development validation and updating such that prediction models can better support medical practice There is an increasing need for personalized evidence based medicine that uses an individualized approach to medical decision making In this Big Data era there is expanded access to large volumes of routinely collected data and an increased number of applications for prediction models such as targeted early detection of disease and individualized approaches to diagnostic testing and treatment Clinical Prediction Models presents a practical checklist that needs to be considered for development of a valid prediction model Steps include

preliminary considerations such as dealing with missing values coding of predictors selection of main effects and interactions for a multivariable model estimation of model parameters with shrinkage methods and incorporation of external data evaluation of performance and usefulness internal validation and presentation formatting The text also addresses common issues that make prediction models suboptimal such as small sample sizes exaggerated claims and poor generalizability The text is primarily intended for clinical epidemiologists and biostatisticians Including many case studies and publicly available R code and data sets the book is also appropriate as a textbook for a graduate course on predictive modeling in diagnosis and prognosis While practical in nature the book also provides a philosophical perspective on data analysis in medicine that goes beyond predictive modeling Updates to this new and expanded edition include A discussion of Big Data and its implications for the design of prediction models Machine learning issues More simulations with missing y values Extended discussion on between cohort heterogeneity Description of ShinyApp Updated LASSO illustration New case studies *EMERGING*

Riley, Danielle van der Windt, Peter Croft, Karel G. M. Moons, 2019-01-24 What is going to happen to me Most patients ask this question during a clinical encounter with a health professional As well as learning what problem they have diagnosis and what needs to be done about it treatment patients want to know about their future health and wellbeing prognosis Prognosis research can provide answers to this question and satisfy the need for individuals to understand the possible outcomes of their condition with and without treatment Central to modern medical practise the topic of prognosis is the basis of decision making in healthcare and policy development It translates basic and clinical science into practical care for patients and populations Prognosis Research in Healthcare Concepts Methods and Impact provides a comprehensive overview of the field of prognosis and prognosis research and gives a global perspective on how prognosis research and prognostic information can improve the outcomes of healthcare It details how to design carry out analyse and report prognosis studies and how prognostic information can be the basis for tailored personalised healthcare In particular the book discusses how information about the characteristics of people their health and environment can be used to predict an individual s future health Prognosis Research in Healthcare Concepts Methods and Impact addresses all types of prognosis research and provides a practical step by step guide to undertaking and interpreting prognosis research studies ideal for medical students health researchers healthcare professionals and methodologists as well as for guideline and policy makers in healthcare wishing to learn more about the field of prognosis Health Informatics Meets EHealth G. Schreier, D. Hayn, 2018-05-18 Biomedical engineering and health informatics are closely related to each other and it is often difficult to tell where one ends and the other begins but ICT systems in healthcare and biomedical systems and devices are already becoming increasingly interconnected and share the common entity of data This is something which is set to become even more prevalent in future and will complete the chain and flow of information from the sensor via processing to the actuator which may be anyone or anything from a human healthcare professional to a robot Methods for automating the processing of information such as signal processing machine learning predictive analytics and decision support are increasingly important for providing actionable information and supporting personalized and preventive healthcare protocols in both biomedical and digital healthcare systems and applications This book of proceedings presents 50 papers from the 12th eHealth conference eHealth2018 held in Vienna Austria in May 2018 The theme of this year s conference is Biomedical Meets eHealth From Sensors to Decisions and the papers included here cover a wide range of topics from the field of eHealth The book will be of interest to all those working to design and implement healthcare today
