Dietary Supplements for the Health and Quality of Cultured Fish Heisuke Nakagawa,Minoru Sato,Delbert M. Gatlin,2007-01-01 Proper nutrition and feeding are critical components of aquaculture Effective utilization of well balanced diet formulations is of utmost importance and influences most aspects of production including the cost yield and quality of resulting products as well as the sustainability of aquacultural practices including potential environmental impacts In addition to the various required macro and micro nutrients emphasis has been placed on non nutritive supplements in recent years These have been found to influence many attributes of freshwater and marine fish particularly taste and colour resistance to disease and health benefits to human consumers This book presents a comprehensive review of the most

important nutrients and non nutritive supplements using scientific evidence to support the best practices for using these compounds in diet formulations to enhance the efficiency and sustainability of aquaculture This book is a valuable resource for students and practitioners in aquaculture and fisheries as well as animal nutrition feeding and husbandry *Dietary Fiber in Health and Disease* George V. Vahouny, David Kritchevsky, 2013-11-21 Dietary fiber is a topic that has burgeoned from an esoteric interest of a few research laboratories to a subject of international interest This growth has been helped by the intense public interest in the potential benefits of adding fiber to the diet The general popularity of fiber may have been helped by the perception that for once medicine was saying do instead of don t There has been a proliferation of excellent scientific books on dietary fiber Why another The Spring Symposium on Dietary Fiber in Health and Disease was an outgrowth of our belief that informal discussion among peers a discussion in which fact is freely interlaced with speculation was the most effective way to organize our knowledge and direct our thinking The normal growth progression of a discipline includes its branching into many areas Soon the expertise which was once general is broken into many specialties Intercommunication becomes increasingly difficult It was our intent to provide a forum that would expose its participants to developments in areas related to their research interest Free exchange under these conditions could not help but broaden everyone s knowledge and expand his horizons We feel that this symposium was singularly successful in achieving its goals It resulted in a free and friendly exchange of knowledge and ideas It helped to establish seeds for future collaborations based on mutual interest and friendship The proceedings of this conference will serve as yet another basic resource in the fiber field *Nutrition and Diabetes* Emmanuel C.
