

# Dillman's recipe

- Total Design Method (TDM)
  - Ordering questions (most important first)
  - Use of graphical design + question writing principles (consistency in the use of large letters and contrasting small letters)
  - Printing the questionnaire in a booklet format with interesting cover
  - Four carefully spaced mailings (postcard follow up one week after the original mailing; a replacement questionnaire and cover letter seven weeks after the first mailing-certified mail; individually printed, addressed, and signed letters; addresses printed onto envelopes rather than on address labels...)

**Maritime Risk and Organizational Learning** Michael Ekow Manuel, 2017-09-29 Bridging an identified gap between research and practice in the domain of risk and organizational learning with respect to human organizational factors and organizational behaviour this book highlights the common and recurring threads in contributory factors to accident causation Based on an extensive research project it investigates how shipping companies as organizations learn from filter and give credence acceptability to differing risk perceptions and how this influences the work culture with special regard to group team dynamics and individual motivation The work is presented in the context of the literature regarding conceptual links between risk and the theoretical and operational themes of organizational learning and in light of interviewees comments The themes include processes and structures of knowledge acquisition information interpretation and distribution organizational memory and change adaptation and also levels of learning The book concludes by discussing some practical implications of the research carried out in various maritime contexts and gives recommendations for the industry and other stakeholders

*The Economics of Protected Marine Species: Concepts in Research and Management* Kristy Wallmo, Kathryn Bisack, Daniel K. Lew, Dale E. Squires, 2016-10-21 Protected marine species have populations that are

depleted decreasing or are at risk of extinction or local extirpation As of 2015 The International Union for the Conservation of Nature a global environmental organization lists approximately 737 marine species worldwide that are considered at risk of extinction Many are provided legal protection through national laws requiring research and management measures aimed at recovering and maintaining the species at a sustainable population level Integral to the policy decision process involving the management and recovery of marine species is the consideration of trade offs between the economic and ecological costs and benefits of protection This suggests that economics at its core the study of trade offs has a significant role In the U S a somewhat traditional use of economics in protected species research and management has involved cost minimization or cost effectiveness analyses to help select or prioritize conservation actions Economic research has also provided estimates of public non market benefits of recovering species which can be used in larger management frameworks such as ecosystem based management and coastal and marine spatial planning Inherent in much of this research however are complex biological and ecological relationships in which varying degrees of scientific uncertainty are present Addressing this type of uncertainty can affect the economic outcomes related to protected species For example recent work suggests that increasing scientific precision in biological sampling and models can greatly affect the magnitude of economic benefits to commercial fisheries while other research suggests that public non market benefits of species recovery are sensitive to uncertainty about baseline population estimates Previous research has illustrated the importance of understanding the biological ecological and economic aspects of protected species management and recovery In this research topic we synthesize current protected marine species economic research and expand the discussion on present and future challenges related to protected species economics The series of manuscripts brings together an array of prominent researchers and advances our understanding of the ecological and economic aspects of managing and recovering protected marine species     Economic Analysis for Ecosystem-Based Management Daniel Holland,James Sanchirico,Robert Johnston,Deepak Jogleka,2012-06-25 Ocean and coastal management regimes are increasingly subject to competing demands from stakeholders Regulations must not only address fishing recreation and shipping but also sand and gravel mining gas pipelines harbor port development offshore wind and tidal energy facilities liquefied natural gas terminals offshore aquaculture and desalinization plants The growing variety and intensity of ocean and coastal uses increases the call for a more holistic comprehensive and coordinated management approach that recognizes the often complex relationships between natural and human systems For both economist and non economist audiences this book describes ways in which economic analysis can be an important tool to inform and improve ecosystem based management EBM Topics include modeling economic impacts benefit cost analysis spatial considerations in EBM incentives and human behaviors and accounting for uncertainty in policy analysis Throughout the book the authors elucidate the different kinds of insights which can be gained from the use of different economic tools In this rigorous and accessible work the authors defy the conventional stereotype that economic perspectives necessarily favor the greatest

commercial development Instead they demonstrate how comprehensive economic analyses consider the full range of potential services offered by marine and coastal ecosystems including the conservation of biodiversity and creation of recreational opportunities
