Gupta,Vineet K. Gahalaut,2014-07-08 Tsunamis are primarily caused by earthquakes Under favourable geological conditions when a large earthquake occurs below the sea bed and the resultant rupture causes a vertical displacement of the ocean bed the entire column of water above it is displaced causing a tsunami In the ocean tsunamis do not reach great heights but can travel at velocities of up to 1000 km hour As a tsunami reaches shallow sea depths there is a decrease in its velocity and an increase in its height Tsunamis are known to have reached heights of several tens of meters and inundate several kilometres inland from the shore Tsunamis can also be caused by displacement of substantial amounts of water by landslides volcanic eruptions glacier calving and rarely by meteorite impacts and nuclear tests in the ocean In this SpringerBrief the causes of tsunamis their intensity and magnitude scales global distribution and a list of major tsunamis are provided The three great tsunamis of 1755 2004 and 2011 are presented in detail The 1755 tsunami caused by the Lisbon earthquake now estimated to range from Mw 8.5 to 9.0 was the most damaging tsunami ever in the Atlantic ocean It claimed an estimated 100 000 human lives and caused wide spread damage The 2004 Sumatra Andaman Mw 9.1 earthquake and the resultant tsunami were the deadliest ever to hit the globe claiming over 230 000 human lives and causing wide spread financial losses in several south and south east Asian countries The 2011 Mw 9.0 Tohoku Oki earthquake and the resultant tsunami were a surprise to the seismologists in Japan and around the globe The height of the tsunami far exceeded the estimated heights It claimed about 20 000 human lives The tsunami also caused nuclear accidents This earthquake has given rise to a global debate on how to estimate the maximum size of an earthquake in a given region and the safety of nuclear power plants in coastal regions This Brief also includes a description of key components of tsunami warning centres progress in deploying tsunami watch and warning facilities globally tsunami advisories and their communication and the way forward

This Handbook should be consulted by anybody interested in the issue of energy security. It convincingly demonstrates why the provision of energy is such a contentious issue, addressing the complex interaction of economic, social, environmental, technical, and political aspects involved. The book is particularly valuable in investigating and highlighting processes in which international actors apply this variety of aspects in re-constructing their notion of energy security, its particular meaning, and the implications thereof. Such understanding of energy security is helpful. Aad F. Correlj, Delft University of Technology, The Netherlands. Energy security has for long been treated as an issue of pure geopolitics. Hugh Dyer and Maria Julia Trombetta aim at broadening energy security debates and extend them to new agendas. Their excellent Handbook offers a fresh perspective on four crucial dimensions: supply, demand, environment, and human security. A diverse group of international energy scholars provides for an in-depth and comprehensive analysis of key contemporary energy problems, ranging from an oil producers' perspectives on energy security to ethical dimensions of renewable energy and climate governance. Andreas Goldthau, Central European University, Hungary. This Handbook brings together energy security experts to explore the implications of framing the energy debate in security terms, both in respect of the governance of energy systems and the practices associated with energy security. The contributors expertly review and analyse the key aspects and research issues in the emerging field of energy security, test the current state of knowledge, and provide suggestions for reflection and further analysis. This involves providing an account of the multiplicity of discourses and meanings of energy security and contextualizing them. They also suggest a rewriting of energy security discourses and their representation in purely economic terms. This volume examines energy security and its conceptual and practical challenges from the perspectives of security of supply, security of demand, environmental change, and human security. It will prove essential for students in the fields of global, international, and national politics of energy, economics, and society, as well as engineering. It will also appeal to policy practitioners and anybody interested in keeping the lights on, avoiding climate change, and providing a secure future for humanity.
