Remote Sensing of the African Seas Vittorio Barale, Martin Gade, 2014-06-02 The African Seas include marginal basins of two major oceans the Atlantic and the Indian a miniature ocean the Mediterranean Sea and an infant ocean the Red Sea Understanding the wide spectrum of environmental features and processes of such a varied collection of marine and coastal regions requires that in situ observation systems be integrated and actually guided by the application of orbital remote sensing techniques This volume reviews the current potential of Earth Observations to help in the exploration of the marginal seas around Africa by virtue of both passive and active techniques working in several spectral ranges i.e. measuring either reflected visible and near infrared sunlight as well as surface emissions in the thermal infrared and microwave spectral regions or again the surface reflection of transmitted lidar or radar impulses of visible or microwave radiation The in depth evaluation of the advantages offered by each technique and spectral region and in particular by the development of advanced multi technique systems contributes to the assessment of the abundant natural resources that the Seas of Africa have to offer of those in dear need of being sustainably exploited and of others that should be protected and maintained in their still pristine conditions

Exploring the Marine Ecology from Space Dmitry V. Pozdnyakov, Lasse H. Pettersson, Anton A. Korosov, 2017-06-10 This book provides results of spatial and temporal distributions of water quality parameters and marine primary production and its relationship with the driving atmospheric ocean circulation and hydrobiological mechanisms established through a synergistic use of multi spectral region spaceborne data and results of numerical model simulations of marine in water and atmospheric processes related to the marine ecosystem The changes in the studied marine oceanic environments are analysed in light of recent climate change that imposes its influence through a set of forward and feedback interactions and forcing

Coastal Hazards Charles W. Finkl, 2012-12-11 This book covers the gamut of coastal hazards that result from short term low frequency events and have high magnitude and far reaching impacts on coastal zones the world over Much of the world s population now lives in low lying coastal zones that are inherently vulnerable to natural hazards such as flooding from hurricanes tropical storms and northeastern storm surges shoreline beach and dune erosion cliff and bluff failures and saltwater intrusion in coastal aquifers used for drinking water supplies In addition to the usual range of hydrometeorological disasters in coastal zones this book covers tsunami impacts and warning systems as well as global perspectives of sea level rise impacts and human perceptions of potential vulnerabilities resulting

from rip currents that cause many drownings each year on beaches Today the use of numerical models that help predict vulnerabilities and provide a basis for shore protection measures is important in modern scientific and engineering systems Final considerations focus on human actions in the form of the urbanization and industrialization of the coast shore protection measures and indicate how environmental degradation around coastal conurbations exacerbates the potential for unwanted impacts Strategies for environmental management in coastal zones from low lying wetlands to high cliffs and rocky promontories are highlighted as a means of living in harmony with Nature and not trying to conquer it **Emerging**

Space Vittorio Barale, J.F.R. Gower, L. Alberotanza, 2010-04-26 To all those sailors Who dreamed before us Of another way to sail the oceans The dedication of this Volume is meant to recall and honour the bold pioneers of ocean exploration ancient as well as modern As a marine scientist dealing with the oceans through the complex tools lters and mechanisms of contemporary research I have always wondered what it was like in centuries past to look at that vast ho zon with the naked eye not knowing what was ahead and yet to sail on I have tried to imagine what ancient sailors felt when the unknown swirls around and engulfs the mind as a forgotten author simply described the brave perhaps reckless act of facing such a hostile menacing and yet fascinating adventure Innovation has always been the key element I think for their success another way a better way a more effective safer and worthier way was the proper answer to the challenge The map of our world has been changed time and again from the geographical as well as the social economic and scienti c points of view by the new discoveries of those sailors One of the positive qualities of human beings is without doubt the inborn desire to expand their horizons to see what lies beyond to learn and understand
