### Introduction to Programming, Algorithms and Flowcharts

#### Programs and Programming:

- A program is a set of logically related instructions that is arranged in a sequence that directs the computer in solving a problem.
- The process of writing a program is called programming. It is a necessary and critical step in data processing.
- An incorrect program delivers results that cannot be used. There are two ways by which one can acquire a program—either purchase an existing program, referred to as *packaged software* or prepare a new program from scratch, in which case it is called *customized software*.
- Software is a collection of computer programs and related data that provides the instructions for telling a computer what to do and how to do it.
- Computer software can be broadly classified into two categories:
  - (a) . System software
  - &
  - (b) . Application software

#### System software:

- System software is a collection of programs that interfaces with the hardware.
- Categories of system software:

**Language translator** It is a system software that transforms a computer program written by a user into a form that can be understood by the machine.

**Operating system (OS)** An operating system manages the computer's resources effectively, takes care of scheduling multiple jobs for execution, and manages the flow of data and instructions between the input/output units and the main memory.
