Benefits of antioxidant supplements for knee osteoarthritis: rationale and reality

Ashok Kumar Grover^{*} and Sue E. Samson

Abstract

Arthritis causes disability due to pain and inflammation in joints. There are many forms of arthritis, one of which is osteoarthritis whose prevalence increases with age. It occurs in various joints including hip, knee and hand with knee osteoarthritis being more prevalent. There is no cure for it. The management strategies include exercise, glucosamine plus chondroitin sulfate and NSAIDs. In vitro and animal studies provide a rationale for the use of antioxidant supplements for its management. This review assesses the reality of the benefits of antioxidant supplements in the management of knee osteoarthritis. Several difficulties were encountered in examining this issue: poorly conducted studies, a lack of uniformity in disease definition and diagnosis, and muddling of conclusions from attempts to isolate the efficacious molecules. The antioxidant supplements with most evidence for benefit for pain relief and function in knee osteoarthritis were based on curcumin and avocado-soya bean unsaponifiables. Boswellia and some herbs used in Ayurvedic and Chinese medicine may also be useful. The benefits of cuisines with the appropriate antioxidants should be assessed because they may be more economical and easier to incorporate into the lifestyle.

Current knowledge

Arthritis may have originated before man itself since it also afflicts other primates [1]. The disease causes disability due to pain and inflammation in joints. There are many different types of arthritis of which rheumatoid arthritis and osteoarthritis (OA) are the most common. Rheumatoid arthritis is an autoimmune disease that affects mainly small joints such as those in the fingers of the hand. OA affects large joints such as hips and knees and also those in the hands. OA is a leading cause of disability with an unknown cause or cure. The global age standardised prevalence of OA in the knee and hip has recently been reported to be 3.8 and 0.85 %, respectively [2]. Worldwide estimates indicate that 9.6 % of men and 18 % of women >60 years have symptomatic OA (<http://www.who.int/chp/topics/rheumatic/en/>). Other risk factors of knee OA include trauma such as torn meniscus, occupation, exercise, gender (more common in females), ethnicity, genetics, obesity, diet and bone density [2]. Since OA normally progresses with

age, its economic burden may increase with the aging human population in the coming decades. This review will focus on knee OA which is more common. The knee joints are the largest and being synovial joints, they provide a very high degree of mobility. A knee joint provides two articulations - one between tibia and femur and the other between patella and femur [3, 4]. The joints allow for flexion, extension and a limited degree of rotation. It contains a bone-cartilage interface and a synovial body. The synovial body contains the fluid whose composition and viscosity are key to the knee operation. The bone-cartilage interface is a complex functional unit and biocomposite at the centre of joint function in which the individual components interact cooperatively and synergistically. Due to this intimate contact between bone and cartilage, any changes in either tissue will influence the other component. Its role in knee OA is discussed in the next section.

Pathophysiology of knee OA

The suggested causes for the development of OA include genetic predisposition, aging, obesity, trauma, and

This next volume in our established series proposes to systematically review the basic science and clinical knowledge of the role of free radicals and antioxidants collectively known as oxidative stress in the pathology of arthritis and other joint diseases. It will describe the most current diagnostic tools, laboratory methods and technology to suggest ways of prevention and treatment and to emphasize the concept of the bench to bedside approach. The book will also provide specific coverage on emerging technology and medical applications including discussions of biomarkers and antioxidants as therapeutic agents and several more relevant aspects. In addition, the book will promote the concept of using biomarkers representative of oxidative stress reactions and free radical damage as well as describe the effect of antioxidants in treating disease in clinical trials. The content will be valuable to researchers studying the development of arthritis joint disease and clinicians treating patients with these diagnoses.

Nutrition and Rheumatic Disease Laura A. Coleman, 2008-03-11. In this book, experts provide a comprehensive review of current knowledge regarding nutrition and dietary management for the complex set of rheumatic conditions. Within the disease-specific chapters, the authors present a historical perspective, a discussion of the major clinical features, current management and treatment, a review of the literature related to nutritional status and diet, and dietary recommendations based on current scientific evidence. The field of rheumatic diseases includes a wide variety of pathologic processes. This book will greatly benefit physicians specializing in internal medicine, family practice, and rheumatology.

Antioxidants in Food, Vitamins and Supplements Amitava Dasgupta, Kimberly Klein, 2014-02-11. *Antioxidants in Food, Vitamins and Supplements* bridges the gap between books aimed at consumers and technical volumes written for investigators in antioxidant research. It explores the role of oxidative stress in the pathophysiology of various diseases as well as antioxidant foods, vitamins, and all antioxidant supplements, including herbal supplements. It offers healthcare professionals a rich resource of key clinical information and basic scientific explanations relevant to the development and prevention of specific diseases. The book is written at an intermediate level and can be easily understood by readers with a college-level chemistry and biology background. Covers both oxidative stress-induced diseases as well as antioxidant-rich foods, not the chemistry of antioxidants. Contains easy-to-read tables and figures for quick reference information on antioxidant foods and vitamins. Includes a glycemic index and a table of ORAC values of various fruits and vegetables for clinicians to easily make recommendations to patients.

The Vitamin Cure for Arthritis Robert G. Smith, Ph.D., Todd Penberthy, 2015-01-01. The general explanation for the cause of arthritis is that over time, our joints simply wear out; that is, the cartilage that lubricates the ends of the bones simply gets worn thinner and thinner until one bone wears directly on another, causing pain and lowering our quality of life. It stands to reason that wear and tear is responsible for some of the damage. It is considered a progressive disease, meaning that once the symptoms are diagnosed, they tend to get worse. Yet arthritis can be reversed. The process of degradation and regrowth in a joint is a dynamic process that continues throughout life. Arthritis results when the joint does not recover from damage. Most people may not realize it, but they have a

direct influence on the current and future health of their joints through their nutritional behaviour With the proper knowledge we can prevent degeneration from taking hold by improving our body's regeneration processes This book offers natural weapons we can use to defend and protect our joints from the destructive effects of poor nutrition and time This clear readable book describes the composition of joints and how they work within the body how normal healthy joints are supported and what can go wrong It describes the degenerative diseases that affect joints and explains the basis of orthomolecular natural megavitamin medicine from a scientific perspective There are several types of arthritis but they all involve degeneration of the joints and tissues surrounding them This book covers the different types Including Osteoarthritis OA Rheumatoid arthritis RA Gout Arthritis caused by infections or inflammation such as Borrelia Lyme Disease fibromyalgia and psoriasis And more THE VITAMIN CURE FOR ARTHRITIS explains each form of arthritis and current and new medical treatments for them More importantly it describes the nutritional approach to help sufferers prevent further progress of the disease and even reverse it
