# B-Spline

- Motivation (recall bezier curve)
  - moving a control point affects the shape of the entire curve- (*global modification property*) – undesirable.
  - Thus, the solution is B-Spline – the degree of the curve is independent of the number of control points
  - E.g - right figure – a B-spline curve of degree 3 defined by 8 control points

Bezier And B Spline Techniques:

   Bézier and B-Spline Techniques Hartmut Prautzsch,Wolfgang Boehm,Marco Paluszny,2013-04-17 Computer aided modeling techniques have been developed since the advent of NC milling machines in the late 40 s Since the early 60 s Bezier and B spline representations evolved as the major tool to handle curves and surfaces These representations are geometrically intuitive and meaningful and they lead to constructive numerically robust algorithms It is the purpose of this book to provide a solid and unified derivation of the various properties of Bezier and B spline representations and to show the beauty of the underlying rich mathematical structure The book focuses on the core concepts of Computer aided Geometric Design CAGD with the intent to provide a clear and illustrative presentation of the basic principles as well as a treatment of advanced material including multivariate splines some subdivision techniques and constructions of arbitrarily smooth free form surfaces In order to keep the book focused many further CAGD methods are ex cluded In particular rational Bezier and B spline techniques are not ad dressed since a rigorous treatment within the appropriate context of projec tive geometry would have been beyond the scope of this book   **Bezier and B-spline Techniques with Matlab** Niyazi Ari,Gökhan APAYDIN,2009-06-18 The aim of this book is to teach students the essential of Bezier and B spline techniques with the aid of examples Computer codes which give an easy interface of Bezier and B spline techniques to the users are implemented as Matlab programs The reason to choose Matlab is that it is easy to use and has a good graphical user interface This book focuses on curves and surfaces using Bezier and B spline techniques It is based on the theory Bezier and B spline Techniques which are known in mathematics Interpolation and approximation methods have been illustrated intensively Some of algorithms are represented using practical cases for example Casteljau algorithm Students and researchers can use this book to succeed good understanding of Bezier and B spline techniques for reliable and efficient studies in accordance within scientific applications   **Bezier and B-spline Techniques for Curve and Surface Generation** Miles McQueen,1983

Parametric Function Alvin Penner,2019-02-23 This Brief investigates the intersections that occur between three different areas of study that normally would not touch each other ODF spline theory and topology The Least Squares Orthogonal Distance Fitting ODF method has become the standard technique used to develop mathematical models of the physical shapes of objects due to the fact that it produces a fitted result that is invariant with respect to the size and orientation of the object It is normally used to produce a single optimum fit to a specific object this work focuses instead on the issue of whether the fit responds continuously as the shape of the object changes The theory of splines develops user friendly ways of manipulating six different splines to fit the shape of a simple family of epiTrochoid curves two types of B zier curve two uniform B splines and two Beta splines This work will focus on issues that arise when mathematically optimizing the fit There are typically multiple solutions to the ODF method and the number of solutions can often change as the object changes shape so two topological questions immediately arise are there rules that can be applied concerning the relative number of local minima and saddle points and are there different mechanisms available by which solutions can either merge and disappear or cross over each other and interchange roles The author proposes some simple rules which can be used to determine if a given set of solutions is internally consistent in the sense that it has the appropriate number of each type of solution
