Intelligent Imaging and Analysis DaeEun Kim, Dosik Hwang, 2020-03-05. Imaging and analysis are widely involved in various research fields including biomedical applications, medical imaging and diagnosis, computer vision, autonomous driving, and robot controls. Imaging and analysis are now facing big changes regarding intelligence due to the breakthroughs of artificial intelligence techniques including deep learning. Many difficulties in image generation, reconstruction, denoising, skills, artifact removal, segmentation, detection, and control tasks are being overcome with the help of advanced artificial intelligence approaches. This Special Issue focuses on the latest developments of learning-based intelligent imaging techniques and subsequent analyses which include photographic imaging, medical imaging, detection, segmentation, medical diagnosis, computer vision, and vision-based robot control. These latest technological developments will be shared through this Special Issue for the various researchers who are involved with imaging itself or are using image data and analysis for their own specific purposes. *Image Processing and Intelligent Computing Systems* Prateek Singhal, Abhishek Verma, Prabhat Kumar, Srivastava, Virender Ranga, Ram Kumar, 2023-01-17. There is presently a drastic growth in multimedia data. During the Covid-19 pandemic, we observed that images helped doctors immensely in the rapid detection of Covid-19 infection in patients. There are many critical applications in which images play a vital role. These applications use raw image data to extract some useful information about the world around us. The quick extraction of valuable information from raw images is one challenge that academicians and professionals face in the present day. This is where image processing comes into action. Image processing's primary purpose is to get an enhanced image or extract some useful information from raw image data. Therefore, there is a major need for some technique or system that addresses this challenge. Intelligent Systems have emerged as a solution to address quick image information extraction. In simple words, an Intelligent System can be defined as a mathematical model that adapts itself to deal with a problem's dynamicity. These systems learn how to act so an image can

reach an objective An Intelligent System helps accomplish various image processing functions like enhancement segmentation reconstruction object detection and morphing The advent of Intelligent Systems in the image processing field has leveraged many critical applications for humankind These critical applications include factory automation biomedical imaging analysis decision econometrics as well as related challenges
