Geotechnical Engineering Jean-Louis Briaud, 2013-10-02 Written by a leader on the subject Introduction to Geotechnical Engineering is first introductory geotechnical engineering textbook to cover both saturated and unsaturated soil mechanics Destined to become the next leading text in the field this book presents a new approach to teaching the subject based on fundamentals of unsaturated soils and extending the

description of applications of soil mechanics to a wide variety of topics This groundbreaking work features a number of topics typically left out of undergraduate geotechnical courses National Association of Broadcasters Engineering Handbook Garrison Cavell, 2017-07-28 The NAB Engineering Handbook is the definitive resource for broadcast engineers It provides in depth information about each aspect of the broadcast chain from audio and video contribution through an entire broadcast facility all the way to the antenna New topics include Ultra High Definition Television Internet Radio Interfacing and Streaming ATSC 3.0 Digital Audio Compression Techniques Digital Television Audio Loudness Management and Video Format and Standards Conversion Important updates have been made to incumbent topics such as AM Shortwave FM and Television Transmitting Systems Studio Lighting Cameras and Principles of Acoustics The big picture comprehensive nature of the NAB Engineering Handbook will appeal to all broadcast engineers everyone from broadcast chief engineers who need expanded knowledge of all the specialized areas they encounter in the field to technologists in specialized fields like IT and RF who are interested in learning about unfamiliar topics Chapters are written to be accessible and easy to understand by all levels of engineers and technicians A wide range of related topics that engineers and technical managers need to understand are covered including broadcast documentation FCC practices technical standards security safety disaster planning facility planning project management and engineering management *Practical E-Manufacturing and Supply Chain Management* Gerhard Greeff, Ranjan Ghoshal, 2004-08-11 New technologies are revolutionising the way manufacturing and supply chain management are implemented These changes are delivering manufacturing firms the competitive advantage of a highly flexible and responsive supply chain and manufacturing system to ensure that they meet the high expectations of their customers who in today's economy demand absolutely the best service price delivery time and product quality To make e manufacturing and supply chain technologies effective integration is needed between various often disparate systems To understand why this is such an issue one needs to understand what the different systems or system components do their objectives their specific focus areas and how they interact with other systems It is also required to understand how these systems evolved to their current state as the concepts used during the early development of systems and technology tend to remain in place throughout the life cycle of the systems technology This book explores various standards concepts and techniques used over the years to model systems and hierarchies in order to understand where they fit into the organization and supply chain It looks at the specific system components and the ways in which they can be designed and graphically depicted for easy understanding by both information technology IT and non IT personnel Without a good implementation philosophy very few systems add any real benefit to an organization and for this reason the ways in which systems are implemented and installation projects managed are also explored and recommendations are made as to possible methods that have proven successful in the past The human factor and how that impacts on system success are also addressed as is the motivation for system investment and subsequent benefit measurement processes Finally the vendor user supply demand

within the e manufacturing domain is explored and a method is put forward that enables the reduction of vendor bias during the vendor selection process The objective of this book is to provide the reader with a good understanding regarding the four critical factors business physical processes systems supporting the processes company personnel and company personal performance measures that influence the success of any e manufacturing implementation and the synchronization required between these factors Discover how to implement the flexible and responsive supply chain and manufacturing execution systems required for competitive and customer focused manufacturing Build a working knowledge of the latest plant automation manufacturing execution systems MES and supply chain management SCM design techniques Gain a fuller understanding of the four critical factors business and physical processes systems supporting the processes company personnel performance measurement that influence the success of any e manufacturing implementation and how to evaluate and optimize all four factors *Applied Computer Science for GGOS Observatories* Alexander N.J. Neidhardt,2017-08-08

This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book s main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4 0
