Load Balancing In Cloud Computing:

Comparative Analysis of Load Balancing Algorithms in Cloud Computing Mohit Tomar, 2017 Abstract Cloud computing is a novel trend emerging in Information Technology IT environments with immense infrastructure and resources. An integral aspect of cloud computing is load balancing. Efficient load balancing in cloud computing ensures effective resource utilization. There are two types of load balancers: the static load balancer and the dynamic load balancer. While both types of load balancers are widely used in the industry, they differ in performance. In this project, the performances of the most widely used static and dynamic load balancers, namely the round robin and the throttled, are compared. Specifically, the project examines whether the throttled algorithm takes less time than the round robin algorithm to access data in cloud computing. The results show that the throttled algorithm takes less time than the round robin algorithm to access data and that this difference is due to a faultiness in the implementation of the round robin algorithm.

Cloud Computing Martin Gilje Jaatun, Gansen Zhao, Chunming Rong, 2009-11-24 Cloud computing was a cloud technology pioneered by Amazon for a long time due to its software technology that is based on the online shopping platform. After Google, Microsoft also followed up, and this technology in fact already exists in our lives, and applications continue to expand, becoming an integral part of life. With the rapid development of the Internet and the demand for high-speed computing of mobile devices, the simplest cloud computing technology has been widely used in online services such as search engine, webmail, and so on. Users can get a lot of information by simply entering a simple instruction. Further, cloud computing is not only for data search and analysis function but also can be used in the biological sciences such as analysis of cancer cells, analysis of DNA structure, gene mapping, sequencing in the future, more smart phone GPS, and other mobile devices through the cloud computing to develop more application services.
