## CHAPTER 14 FINANCIAL STATEMENT ANALYSIS

### DISCUSSION QUESTIONS

1. Liquidity is the ability of a company to convert assets into cash. Short-term creditors such as banks and financial institutions are most concerned with liquidity. Solvency is the ability of a company to pay its debts. Long-term creditors, such as bondholders, are primarily concerned with a company's solvency. Profitability is the ability of a company to generate earnings. Investors, such as stockholders, are primarily concerned with profitability because it determines whether the company's stock price will increase.
2. Comparative statements provide information about changes between dates or periods. Trends indicated by comparisons may be far more significant than the data for a single date or period.
3. Before this question can be answered, the increase in net income should be compared with changes in sales, expenses, and assets for the current year. The return on total assets for both periods should also be compared. If these comparisons indicate favorable trends, the operating performance has improved. If not, the apparent favorable increase in net income may be offset by unfavorable trends in other areas.
4. Generally, the two ratios would be very close because most service businesses sell services and hold very little inventory.

**Research** Hiroshi Obata,Fumiko Hiki,2025-07-02 This book provides a broad overview of revenue management and examines this topic from different perspectives It is divided into three major parts The first part deals with issues related to business model changes the second part deals with customer market and marketing issues and the third part examines revenue management and related issues from various other perspectives The book is dedicated to the theory and practice of revenue management Although cost management tends to focus on expenditure it is important to pay attention to revenue as well If a company is unable to generate sufficient revenues it will not be able to generate a profit no matter how hard it tries to reduce the costs thereby threatening its long term existence For this reason revenue management along with cost management is essential In addition to costs research on cost drivers has made progress in recent years However systematic research on revenue is still incomplete There is thus a need for theoretical and empirical research on various issues related to revenue management and to systematize them **The Timing of Income Recognition in Tax Law and the Time**

**Value of Money** Moshe Shekel,2009-05-28 Time itself creates advantages and disadvantages in the field of taxation The timing of the recognition of income and expenses for tax purposes has two main implications firstly for the timing of the collection of tax and secondly for the question of quantification i e how to ensure that the difference between the timing of the recognition of income or expenses as opposed to the respective dates on which the amounts are actually received or paid does not distort the determination of the amount of chargeable income The time component is a weapon in the confrontation between the opposing motivations of the taxpayers and the tax authorities In any given fiscal year taxpayers seek to present a minimal picture of their chargeable income by deferring the recognition of income or advancing the recognition of expenses As opposed to this the tax authorities adopt the opposite strategy maximizing taxable profit in any given year This book critically examines the various approaches that have been adopted in the tax systems in the UK the US and Israel in relation to the timing of income recognition and expenses for tax purposes It suggests an innovative tax model that identifies the advantages that arise to the taxpayer as a result of the differences between the timing of the recognition of income and expenses and the timing of the receipt of the revenue or the payment of a liability and taxes only that advantage
