This volume contains the proceedings of the 3rd International Conference on Business Process Management BPM 2005 organized by LORIA in Nancy France September 5-8 2005. This year BPM included several innovations with respect to previous editions most notably the addition of an industrial program and of co located workshops. This was the logical result of the significant and still growing industrial interest in the area and of the broadening of the research communities working on BPM topics. The interest in business process management and in the BPM conference was demonstrated by the quantity and quality of the paper submissions. We received over 176 contributions from 31 countries accepting 25 of them as full papers 20 research papers and 5 industrial papers while 17 contributions were accepted as short papers. In addition to the regular industry and short presentations invited lectures were given by Frank Leymann and Gustavo Alonso. This combination of research papers industrial papers keynotes and workshops all of very high quality has shown that BPM has become a mature conference and the main venue for researchers and practitioners in this area. We would like to thank the members of the Program Committee and the reviewers for their efforts in selecting the papers. They helped us compile an excellent scientific program. For the difficult task of selecting the 25 best papers 14% acceptance rate and 17 short papers each paper was reviewed by at least three reviewers except some out of scope papers.

Business Process Management Mathias Weske,2019-06-22 Business process management is usually treated from two different perspectives business administration and computer science While business administration professionals tend to consider information technology as a subordinate aspect in business process management for experts to handle by contrast computer science professionals often consider business goals and organizational regulations as terms that do not deserve much thought but require the appropriate level of abstraction Matthias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management To this end he details the complete business process lifecycle from the modeling phase to process enactment and improvement taking into account all different stakeholders involved After starting with a presentation of general foundations and abstraction models he explains concepts like process orchestrations and choreographies as well as process properties and data dependencies Finally he presents both traditional and advanced business process management architectures covering for example workflow management systems service oriented architectures and data driven approaches In addition he shows how standards like WfMC SOAP WSDL and BPEL fit into the
