Yakubovich, Yury Luchko, 2012-12-06 The aim of this book is to develop a new approach which we called the hypergeometric one to the theory of various integral transforms convolutions and their applications to solutions of integro-differential equations operational calculus and evaluation of integrals We hope that this simple approach which will be explained below allows students post graduates in mathematics physicists and technicians and serious mathematicians and researchers to find in this book new interesting results in the theory of integral transforms special functions and convolutions The idea of this approach can be found in various papers of many authors but systematic discussion and development is realized in this book for the first time Let us explain briefly the basic points of this approach As it is known in the theory of special functions and its applications the hypergeometric functions play the main role Besides known elementary functions this class includes the Gauss's Bessel's Kummer's functions etc In general case the hypergeometric functions are defined as linear combinations of the Mellin Barnes integrals These questions are extensively discussed in Chapter 1 Moreover the

Mellin Barnes type integrals can be understood as an inversion Mellin transform from the quotient of products of Euler s gamma functions Thus we are led to the general constructions like the Meijer s G function and the Fox s H function

Integral Transforms in Science and Engineering K. Wolf,2013-11-21 Integral transforms are among the main mathematical methods for the solution of equations describing physical systems because quite generally the coupling between the elements which constitute such a system these can be the mass points in a finite spring lattice or the continuum of a diffusive or elastic medium prevents a straightforward single particle solution By describing the same system in an appropriate reference frame one can often bring about a mathematical uncoupling of the equations in such a way that the solution becomes that of noninteracting constituents The tilt in the reference frame is a finite or integral transform according to whether the system has a finite or infinite number of elements The types of coupling which yield to the integral transform method include diffusive and elastic interactions in classical systems as well as the more common quantum mechanical potentials The purpose of this volume is to present an orderly exposition of the theory and some of the applications of the finite and integral transforms associated with the names of Fourier Bessel Laplace Hankel Gauss Bargmann and several others in the same vein The volume is divided into four parts dealing respectively with finite series integral and canonical transforms They are intended to serve as independent units The reader is assumed to have greater mathematical sophistication in the later parts though

[Laser Processing: Surface Treatment and Film Deposition](#) J. Mazumder,O. Conde,R. Vilar,W. Steen,2012-12-06 Synthesis of nonequilibrium metallic phases has been an area of great interest to the materials processing community since early 1960 Inherent rapid cooling rates in laser processing are being used to engineer non equilibrium microstructures which cannot be rivaled by other processes This lecture will discuss the phenomena involved and its application in designing materials with tailored properties

What is non equilibrium Synthesis This is a synthesis method to produce binary or higher order materials where kinetics of the process affects the transport of the constituent elements during phase transformation resulting in a composition or crystallographic configuration which is different from what is observed when the elements arrange themselves with the lowest possible Gibbs Free energy which is the equilibrium condition Figure 1 illustrates the phenomena Phase diagram under equilibrium condition is illustrated by the solid line whereas the no equilibrium phase diagram is represented by the dotted line One can observe the shrinkage of the phase field under non equilibrium condition Any alloy composition between the solidus lines of the equilibrium and non equilibrium phase diagram will be a non equilibrium alloys with extended solid solution

Partial Differential Equations in Mechanics 1 A.P.S. Selvadurai,2000-10-19 This two volume work focuses on partial differential equations PDEs with important applications in mechanical and civil engineering emphasizing mathematical correctness analysis and verification of solutions The presentation involves a discussion of relevant PDE applications its derivation and the formulation of consistent boundary conditions

Partial Differential Equations in Mechanics 2 A.P.S. Selvadurai,2013-06-29 For he who knows not mathematics cannot know any other sciences what is more he cannot discover his own ignorance or find its proper remedies Opus Majus Roger Bacon 1214 1294 The material presented in these monographs is the outcome of the author's long standing interest in the analytical modelling of problems in mechanics by appeal to the theory of partial differential equations The impetus for writing these

volumes was the opportunity to teach the subject matter to both undergraduate and graduate students in engineering at several universities. The approach is distinctly different to that which would be adopted should such a course be given to students in pure mathematics in this sense the teaching of partial differential equations within an engineering curriculum should be viewed in the broader perspective of The Modelling of Problems in Engineering. An engineering student should be given the opportunity to appreciate how the various combination of balance laws conservation equations kinematic constraints constitutive responses thermodynamic restrictions etc culminates in the development of a partial differential equation or sets of partial differential equations with potential for applications to engineering problems. This ability to distill all the diverse information about a physical or mechanical process into partial differential equations is a particular attraction of the subject area.

The Double Mellin-barnes Type Integrals And Their Application To Convolution Theory

Semyon B Yakubovich, Thanh Hai Nguyen, 1992-05-26 This book presents new results in the theory of the double Mellin Barnes integrals popularly known as the general H function of two variables. A general integral convolution is constructed by the authors and it contains Laplace convolution as a particular case and possesses a factorization property for one dimensional H transform. Many examples of convolutions for classical integral transforms are obtained and they can be applied for the evaluation of series and integrals.
