Howlett,2005-09 The four volume set LNAI 3681 LNAI 3682 LNAI 3683 and LNAI 3684 constitute the refereed proceedings of the 9th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2005 held in Melbourne Australia in September 2005 The 716 revised papers presented were carefully reviewed and selected from nearly 1400 submissions The papers present a wealth of original research results from the field of intelligent information processing in the broadest sense The second volume contains papers on machine learning immunity based systems medical diagnosis intelligent hybrid systems and control emotional intelligence and smart systems context aware evolvable systems intelligent fuzzy systems and control knowledge representation and its practical application in today s society approaches and methods into security engineering communicative intelligence intelligent watermarking algorithms and applications intelligent techniques and control e learning and ICT logic based intelligent information systems intelligent agents and their applications innovations in intelligent agents ontologies and the semantic web knowledge discovery in data streams computational intelligence tools techniques and algorithms watermarking applications multimedia retrieval soft computing approach to industrial engineering and experience management and information systems Efficient adaptive query processing on large database systems available in the cloud environment Clayton Maciel Costa,António Luís Pinto Ferreira de Sousa,2020-09-15 Nowadays many companies are migrating their applications and data to cloud service providers mainly because of their ability to answer quickly to business requirements Thereby the performance is an important requirement for most customers when they wish to migrate their applications to the cloud Therefore in cloud environments resources should be acquired and released automatically and quickly at runtime Moreover the users and service providers expect to get answers in time to ensure the service SLA Service Level Agreement Consequently ensuring the QoS Quality of Service is a great challenge and it increases when we have large amounts of data to be manipulated in this environment To resolve this kind of problems several researches have been focused on shorter execution time using adaptive query processing and or prediction of resources based on current system status However they present important limitations For example most of these works does not use monitoring during query execution and or presents intrusive solutions i e applied to the particular context The aim of this book is to present the development of new solutions strategies to efficient adaptive query processing on large databases available in a cloud environment It must integrate adaptive re optimization at query runtime and their costs are based on the SRT Service Response Time SLA QoS performance parameter Finally the proposed solution will be evaluated on large scale with large volume of data machines and queries in a cloud computing infrastructure Finally this

work also proposes a new model to estimate the SRT for different request types database access requests This model will allow the cloud service provider and its customers to establish an appropriate SLA relative to the expected performance of the services available in the cloud **Location-Based Services** Jochen Schiller,Agnès Voisard,2004-05-21 Location based services LBS are a new concept integrating a user s geographic location with the general notion of services such as dialing an emergency number from a cell phone or using a navigation system in a car Incorporating both mobile communication and spatial data these applications represent a novel challenge both conceptually and technically The purpose of this book is to describe in an accessible fashion the various concepts underlying mobile location based services These range from general application related ideas to technical aspects Each chapter starts with a high level of abstraction and drills down to the technical details Contributors examine each application from all necessary perspectives namely requirements services data and scalability An illustrative example begins early in the book and runs throughout serving as a reference This book defines the LBS field and identifies its capabilities challenges and technologies The contributors are recognized experts from academia and industry Coverage includes navigation systems middleware interoperability standards and mobile communications A sample application the find friend application is used throughout the book to integrate the concepts discussed in each chapter *Database Modeling and Design* Toby J. Teorey,Sam S. Lightstone,Tom Nadeau,H.V. Jagadish,2011-02-10 Database Modeling and Design Fifth Edition focuses on techniques for database design in relational database systems This extensively revised fifth edition features clear explanations lots of terrific examples and an illustrative case and practical advice with design rules that are applicable to any SQL based system The common examples are based on real life experiences and have been thoroughly class tested This book is immediately useful to anyone tasked with the creation of data models for the integration of large scale enterprise data It is ideal for a stand alone data management course focused on logical database design or a supplement to an introductory text for introductory database management In depth detail and plenty of real world practical examples throughout Loaded with design rules and illustrative case studies that are applicable to any SQL UML or XML based system Immediately useful to anyone tasked with the creation of data models for the integration of large scale enterprise data
