**Gas-Liquid and Liquid-Liquid Separators** A. K. Nigam, 2015-08 This practical guide is designed to help engineers and operators develop a feel for selection specification operating parameters and trouble shooting separators form an understanding of the uncertainties and assumptions inherent in operating the equipment The goal is to help familiarize operators with the knowledge and tools required to understand design flaws and solve everyday operational problems for types of separators The most important gas liquid separations that take place in oil field operation have been investigated An inventory has been made of the conditions under which the separations have to take place and which requirements have to be fulfilled The presently available separator types have been evaluated with respect to the suitability to fulfil the requirements listed above It appeared that many separator types were not specifically designed for high pressure gas liquid separation rather for either atmospheric gas liquid or high pressure gas dust separation It also appeared that in many cases the behaviour of the separator could not be reliably predicted under the conditions of the practical application

**Fluid Mechanics, Heat Transfer, and Mass Transfer** K. S. Raju, 2011-04-20 This broad based book covers the three major areas of Chemical Engineering Most of the books in the market involve one of the individual areas namely Fluid Mechanics Heat Transfer or Mass Transfer rather than all the three This book presents this material in a single source This avoids the user having to refer to a number of books to obtain information Most published books covering all the three areas in a single source emphasize theory rather than practical issues This book is written with emphasis on practice with brief theoretical concepts in the form of questions and answers not adopting stereo typed question answer approach practiced in certain books in the market bridging the two areas of theory and practice with respect to the core areas of chemical engineering Most parts of the book are easily understandable by those who are not experts in the field Fluid Mechanics chapters include basics on non Newtonian systems which for instance find importance in polymer and food processing flow

through piping flow measurement pumps mixing technology and fluidization and two phase flow For example it covers types of pumps and valves membranes and areas of their use different equipment commonly used in chemical industry and their merits and drawbacks Heat Transfer chapters cover the basics involved in conduction convection and radiation with emphasis on insulation heat exchangers evaporators condensers reboilers and fired heaters Design methods performance operational issues and maintenance problems are highlighted Topics such as heat pipes heat pumps heat tracing steam traps refrigeration cooling of electronic devices NOx control find place in the book Mass transfer chapters cover basics such as diffusion theories analogies mass transfer coefficients and mass transfer with chemical reaction equipment such as tray and packed columns column internals including structural packings design operational and installation issues drums and separators are discussed in good detail Absorption distillation extraction and leaching with applications and design methods including emerging practices involving Divided Wall and Petluk column arrangements multicomponent separations supercritical solvent extraction find place in the book *Handbook of Separation Process Technology* Ronald W.
