Toledo,2012-12-06 Ten years after the publication of the first edition of Fundamentals of Food Process Engineering there have been significant changes in both food science education and the food industry itself Students now in the food science curriculum are generally better prepared mathematically than their counterparts two decades ago The food science curriculum in most schools in the United States has split into science and business options with students in the science option following the Institute of Food Technologists minimum requirements The minimum requirements include the food engineering course thus students enrolled in food engineering are generally better than average and can be challenged with more rigor in the course material The food industry itself has changed Traditionally the food industry has been primarily involved in the canning and freezing of agricultural commodities and a company s operations generally remain within a single commodity Now the industry is becoming more diversified with many companies involved in operations involving more than one type of commodity A number of formulated food products are now made where the commodity connection becomes obscure The ability to solve problems is a valued asset in a technologist and often solving problems involves nothing more than applying principles learned in other areas to the problem at hand A principle that may have been commonly used with one commodity may also be applied to another commodity to produce unique products
