Environmental Sciences Matthew N. O. Sadiku,Uwakwe C. Chukwu,Olaniyi D. Olaleye,2022-02-09 In a modern society it is easy to forget that our society depends largely on the environmental processes that govern our world Environment refers to an aggregate of surroundings in which living beings such as humans animals and plants live and non living things exist It

includes air water land living organisms and materials surrounding us The environment is an important part of our daily lives Environmental issues are now part of every career path and employment area Environmental science is an interdisciplinary field that applies principles from all the known technologies and sciences to study the environment and provide solutions to environmental problems It is the study of how the earth works and how we can deal with the environmental issues we face There is an ever demanding need for experts in this field because the environment is responsible for making our world beautiful and habitable For this reason environmental science is now being taught at high schools and higher institutions of learning Education on environmental science will empower the youths to take an active role in the world in which they live

What is Global Engineering Education For? The Making of International Educators, Part I & II Gary Downey, Kacey Beddoes, 2022-05-31 Global engineering offers the seductive image of engineers figuring out how to optimize work through collaboration and mobility Its biggest challenge to engineers however is more fundamental and difficult to better understand what they know and value qua engineers and why This volume reports an experimental effort to help sixteen engineering educators produce personal geographies describing what led them to make risky career commitments to international and global engineering education The contents of their diverse trajectories stand out in extending far beyond the narrower image of producing globally competent engineers Their personal geographies repeatedly highlight experiences of incongruence beyond home countries that provoked them to see themselves and understand their knowledge differently The experiences were sufficiently profound to motivate them to design educational experiences that could challenge engineering students in similar ways For nine engineers gaining new international knowledge challenged assumptions that engineering work and life are limited to purely technical practices compelling explicit attention to broader value commitments For five non engineers and two hybrids gaining new international knowledge fueled ambitions to help engineering students better recognize and critically examine the broader value commitments in their work A background chapter examines the historical emergence of international engineering education in the United States and an epilogue explores what it might take to integrate practices of critical self analysis more systematically in the education and training of engineers Two appendices and two online supplements describe the unique research process that generated these personal geographies especially the workshop at the U S National Academy of Engineering in which authors were prohibited from participating in discussions of their manuscripts Table of Contents The Border Crossers Personal Geographies of International and Global Engineering Educators Gary Lee Downey From Diplomacy and Development to Competitiveness and Globalization Historical Perspectives on the Internationalization of Engineering Education Brent Jesiek and Kacey Beddoes Crossing Borders My Journey at WPI Rick Vaz Education of Global Engineers and Global Citizens E Dan Hirleman In Search of Something More My Path Towards International Service Learning in Engineering Education Margaret F Pinnell International Engineering Education The Transition from Engineering Faculty Member to True Believer D Joseph Mook Finding and Educating Self and Others Across
