Wessel, Thijs de Zee, 2025-08-02 This edited book investigates whether and if so to what extent the European Union began to turn its recently uttered ambition of becoming a geopolitical Union into practice It does so by bringing a range of scholars from various institutions and disciplines among others political science European law European studies together asking them whether in their specific field they can observe a geopolitical turn in the European Union's

policy making The result of this intellectual endeavour can be found in this book a book that makes a first attempt at empirically testing the Union's ability to effectively respond to ever and rapidly changing conditions for conducting international politics in a rule based system The volume is divided into two separate yet mutually informing parts Part I consists of a series of empirical chapters assessing the EU's actorness vis vis other regional powers regional and international organisations This is followed by several empirical snapshots looking into specific policy areas in Part II As we combine the insights from both parts we attempt to contribute to the debate on the changing nature of the European Union in challenging times Our approach then is primarily an empirical one And yet building upon these conclusions we are able to also draw conceptual conclusions about the EU's increasing geopolitical nature or the lack thereof These conclusions make this a relevant read not only for academics but also for practitioners of European law and European integration Marek Neuman is Assistant Professor in EU Foreign Policy and Jean Monnet Chair of European Politics and Governance at the Faculty of Arts of the University of Groningen The Netherlands Ramses A Wessel is Professor of European Law at the Faculty of Law of the University of Groningen The Netherlands Thijs de Zee is a PhD Candidate at the Faculty Campus Fryslân of the University of Groningen The Netherlands Chapter 3 is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

**How China is**

**Reshaping the Global Economy** Rhys Jenkins, 2022-06-16 China's growing economic involvement in Sub Saharan Africa and Latin America has been a source of major controversy The official Chinese position maintains that the growth of bilateral relations is of mutual benefit and provides a good example of South South cooperation Critics on the other hand see the economic relations between China and other developing countries as highly unequal with most of the benefits accruing to China and a few local elites They also point to negative socio economic political and environmental consequences How China is Reshaping the Global Economy Development Impacts in Africa and Latin America throws more light on these controversies through a comparative study of China's impact on the two regions It looks not just at bilateral relations between China and the two regions but also analyses the changes in the global economy brought about as a result of the shift in economic activity from North America and Western Europe to Asia This book looks at the factors which led to rapid economic growth in China and the way in which this has affected global manufacturing commodity markets the international presence of Chinese

companies and financial flows. It examines the different forms of Chinese economic involvement in Sub-Saharan Africa and Latin America, the main drivers, and economic, social, political, and environmental consequences. It ends with a comparison of the two regions that highlights the importance of different histories and political and institutional contexts in determining the impacts of China. Since the first edition of *How China is Reshaping the Global Economy Development Impacts in Africa and Latin America*, China's role in the global economy has continued to expand, and the Chinese government's foreign policy has become more assertive. This new edition documents these changes and their implications for SSA and LAC.

The direct effects on natural resources, including transition minerals, energy, and water, as well as greenhouse gas emissions and waste-related pollution, can be said to constitute the environmental footprint of the ICT sector. There are also indirect environmental effects from the use of digital technologies and services in different sectors of the economy, and the Report includes a dedicated chapter on e-commerce.
