#### II. Working Capital

Working capital is the amount of capital required to start up the plant and finance ordinarily amounts to the production cost for 1 month of operation before revenues from the process start. In general it will be found to be amount equal to 15 to 20% of the fixed capital investment or 25% of annual product sales value?\*\*.

The working capital for an industrial plant consists of the total amount of money invested in raw materials and supplies carried in stock, finished products in stock and semifinished products in the process of being manufactured, accounts receivable, cash kept on hand for monthly payment of operating expenses, such as salaries, wages, and raw-material purchases, accounts payable, and taxes payable.

#### D. Total Production Cost

Important part of a complete cost estimate besides capital investment is the estimation of costs for operating the plant and selling the products. Capital expenditures occur once during the life of a project but operating expenses are recurring expenses and, as such, significantly affect the cash flow and profitability of a venture. These costs can be grouped under total production cost. Total production cost is generally divided into the categories of manufacturing costs and general expenses.

#### I. Manufacturing Costs

The manufacturing expense will be interpreted to mean all expenses required to make a product and to ready it for shipment. These expenses, as considered here, are divided into three classifications as follows: direct production costs, fixed charges, and plant-overhead cost.

#### II. General Expenses

In addition to the manufacturing costs, other general expenses are involved in any company's operations. These general expenses may be classified as administrative expenses, distribution and marketing expenses, research and development expenses, and financing expenses.

#### E. Classification of Cost Estimates

An estimate of the capital investment for a process may vary from a predesign estimate based on little information except the size of the proposed project to a detailed estimate

These decays guideline are believed to be an ecourate an poreeliss, but are very general and not for specific design spaces. They seem designed for engineers to do preliminary designs and process aspecification sheets. The final design must always be guaranteed for the service selected by the manufacturing version, but these judelines will precify reduce the amount of up front angineering four-situation and several process for a resource for angineers with approximate.
