Handbook Of Environment And Waste Management: Air And Water Pollution Control Yung-tse Hung, Lawrence K Wang, Nazih K Shamma, 2012-02-13 The Handbook of Environment and Waste Management Volume 1 Air and Water Pollution Control is a comprehensive compilation of topics that are at the forefront of many technical advances and practices in air and water pollution control These include air pollution control water pollution control water treatment wastewater treatment industrial waste treatment and small scale wastewater treatment Internationally recognized authorities in the field of environment and waste management contribute chapters in their areas of expertise This handbook is an essential source of reference for professionals and researchers in the areas of air water and waste management and as a text for advanced undergraduate and graduate courses in these fields Application of Adsorbents for Water Pollution Control Amit

Bhatnagar, 2012-11-11 Among various water and wastewater treatment technologies the adsorption process is considered better because of lower cost simple design and easy operation Activated carbon a universal adsorbent is generally used for the removal of diverse types of pollutants from water and wastewater Research is now being directed towards the modification of carbon surfaces to enhance its adsorption potential towards specific pollutants However widespread use of commercial activated carbon is sometimes restricted especially in developing or poor countries due to its higher costs Attempts are therefore being made to develop inexpensive adsorbents utilizing abundant natural materials agricultural and industrial waste materials Use of waste materials as low cost adsorbents is attractive due to their contribution in the reduction of costs for waste disposal therefore contributing to environmental protection This e book explores knowledge on recent developments in adsorbents synthesis and their use in water pollution control This handy reference work is intended for researchers and scientists actively engaged in the study of adsorption and the development and application of efficient adsorption technology for water treatment This e book covers a wide range of topics including modeling aspects of adsorption process and the applications of conventional and non conventional adsorbents in water remediation emphasizing sorption mechanisms of different pollutants on the adsorbents Horizons in Bioprocess Engineering Ravindra

Pogaku, 2019-10-12 This book is divided into four parts that outline the use of science and technology for applications pertaining to chemical and bioprocess engineering The book endeavors to help academia researchers and practitioners to use the principles and tools of Chemical and Bioprocess Engineering in a pertinent way while attempting to point out the novel thoughts associated with the brain storming concepts encountered As an example the ability to use case studies appropriately is more important to most practitioners *Solid Waste Management and Safe Drinking Water in Context of*

Mizoram and Other States in India Rajendra Prasad, 2016-11-20 Water is the most essential commodity for human consumption and one of the most important renewable resources which must be prevented from deterioration in quality and quantity both With rapid growing population and improved living standards the pressure on water resources is increasing

Exploitation of water from the resources for domestic industrial and agricultural purposes puts resources Pollution of surface and subsurface water resources poses a serious threat to human health and environment The surface water sources are largely influenced by anthropogenic activities As most surface water sources are already polluted by rapid urbanization and industrialization its adverse effects on shallow subsurface groundwater aquifers are a cause of concern as large population is depending on it The chemical composition of groundwater is related to the soluble products of rock weathering and decomposition and changes with respect to time and space Some elements are essential in trace amounts for human consumption while higher concentrations of the same can cause toxic effects Water quality depends on local geology distance from sea industrial zone agricultural area and urbanization

Mine Closure N.C. Saxena, 2008-09-01 Mining is basically an intermediate use of land and it causes various impacts on all the components of environment In most situations the impacts on land are severe and may cause the land to become useless for any economic use after mining Since the mining companies take land areas which have been in various uses before the onset of mining activities it should have been obligatory for the companies to develop the land areas for uses most suitable for the economic activities after mining Though this was known right from the inception of the mining activities the efforts towards developing the land after mining were negligible This has resulted in devastation of mined out land in many locations in the country Keeping in view the importance and the necessity of development of land areas legislation have been formulated for mine closure The legislation are recent not many mines have been closed in accordance with the provisions therein A lot of work is still required to be done to make mine closure really effective All over the world the importance of the mine closure is being realized due mainly to the following reasons Closure planning at all the stages in a mine's life is important to the economics of a mine and such a planning results in a large cost savings In this book the following aspects of mine closure planning and implementation in the opencast and underground mines with special reference to the mining situations in the India have been outlined 1 Impacts of mining on environmental components and their roles in mine closure planning 2 Legal social and economic necessity of mine closure 3 Land use planning as a tool for mine closure planning and implementation 4 How to incorporate mine closure in mine planning 5 Mine closure planning in underground and opencast mines 6 Implications of mine fires in mine closure 7 Mine closure planning for small mines 8 Taking care of the abandoned mines i.e. closure of abandoned mines 9 Economics of mine closure 10 Management of ecology during mine closure The book is expected to be useful to the practical mining engineers and environmentalists in mine planning and design It should also be useful to the researchers and students of mining and environment
