Doumani,2001-01-01 Environmental health remains at the periphery of sustainable development because it is inadequately defined and institutionally fragmented This publication aims to provide ways of addressing this multisectoral problem It is in three parts The first looks at harmonising sectoral priorities and shows that environmental health can target at least as much disease as the health sector The second part provides environmental health assessment guidelines The third part looks at the results of a pilot project to put theory into practice in Ghana Defining the Urban Deljana Iossifova,Christopher N.H

Doll,Alexandros Gasparatos,2017-10-06 What is urban How can it be described and contextualised How is it used in theory and practice Urban processes feature in key international policy and practice discourses They are at the core of research agendas across traditional academic disciplines and emerging interdisciplinary fields However the concept of the urban remains highly contested both as material reality and imaginary construct The urban remains imprecisely defined Defining the Urban is an indispensable guide for the urban transdisciplinary thinker and practitioner Parts I and II focus on how Academic Disciplines and Professional Practices respectively understand and engage with the urban Included among others are Architecture Ecology Governance and Sociology Part III Emerging Approaches outlines how elements from theory and practice combine to form transdisciplinary tools and perspectives Written by eminent experts in their respective fields Defining the Urban provides a stepping stone for the development of a common language a shared ontology in the disjointed fields of urban research and practice It is a comprehensive and accessible resource for anyone with an interest in understanding how urban scholars and practitioners can work together on this complex theme Environmental Change, Climate and Health P. Martens,A. J. McMichael,2009-09-03 The advent of global environmental change with all its

uncertainties and requirement for long term prediction brings new challenges and tasks for scientists the public and policy makers A major environmental upheaval such as climate change is likely to have significant health effects Current mainstream epidemiological research methods do not always adequately address the health impacts that arise within a context in which the ecological and other biophysical processes display non linear and feedback dependent relationships The agenda of research and policy advice must be extended to include the larger framed environmental change issues This book identifies the nature and scope of the problem and explores the conceptual and methodological approaches to studying these relationships modelling their future realisation providing estimates of health impacts and communicating the attendant uncertainties This timely volume will be of great interest to health scientists and graduate students with an interest in the effects of global environmental change
