reason as it migrates from its specialized institutions into society. It explores how science permeates shared human consciousness to produce effects that ripple through the entire social body to restructure relations between persons, discourses, institutions, and power in ways which we are barely conscious of. The book shows how science through its entwinement with power, discourses, and practices presents certain social arrangements as natural and certain courses of action as beyond question. By arguing for a non-reductive liberal scientific naturalism that sees science as one form of rationality amongst others, it opens possibilities for thought and action beyond scientific knowledge. Examining the shifting relations between science and other social institutions, discourses, and power, the book addresses the narrowing of freedom by the instrumental modes of thinking that accompany scientific and technological change. McIntyre simultaneously raises the question of the good life and the question of a philosophical critique both directed towards science and at the same time shaped by and responsive to it. By analysing the works of Foucault and Habermas in terms of their social, political, and historical contexts, it reveals the two thinkers as linked by a commitment to the Enlightenment tradition and its emancipatory telos. The significant differences between the two are seen to result from Foucault's radicalization of this tradition, a radicalization which is at the same time implicit within the Enlightenment project itself.
