Integral Facade Construction Tillmann Klein, TU Delft, Architecture and the Built Environment, 2013-06-03 Integral Facade Construction focuses on the future development of the curtain wall While the requirements on facades have slowly increased over the last decades the curtain wall has evolved from craftsmanship oriented constructions to highly developed facade systems But its constructional principle is still the same Simplified it can be described as a two dimensional stick system with infill With the latest requirements of almost energy neutral buildings faster building processes and increasing technicalisation of the building envelope this constructional principle is reaching its limits The curtain wall system has reached a state of maturity and it needs a new approach to guaranty that this successful product will meet the challenges of the future

Imagine No. 01: Facades Ulrich Knaack, Tillmann Klein, Marcel Bilow, 2008 This books comprises various themes around imaginary facades and building envelopes Aspects such as function integration networking of elements new structures and materials as well as the addition of functions to existing structures are investigated in around 85 examples

*Facade Engineering - Concepts, Materials, Techniques and Principles of Construction*, 2025-09-03 Facade engineering and design is a challenging task that requires the optimal consideration and addressing of multidisciplinary issues and aspects Over the past 15 years facades have become increasingly complex with dynamic and smart facades ability to adapt to changing temperature and lighting conditions Newly developed materials and technologies have broadened the scope of facade functions This book presents a selection of research contributions to provide a comprehensive overview of facade design focusing on material analysis strategies and approaches for energy efficient facades based on scientific sustainable principles as well as high performance requirements such as fire risk and heat transfer and environmental design and process methodologies Contributions focus on the development of new strategies for maintaining and designing traditional facades as well as the optimal application of new technologies for modern adaptive facades and building envelopes

**Construction of the Façade Systems** Ingrid Paoletti, Massimiliano Nistri, 2023-12-04 The book explores the advanced fa ade systems according to the productive and constructive contents in a cognitive and operative form as a manual text to provide guidelines for researchers technicians and professionals It provides operational

guidance for the technological design production planning and site executive coordination for the realization of fa ade systems The analysis deals with the main building elements and technical interfaces The study of the fa ade systems after explaining the anchoring structures and their connections to the load bearing elements investigates the criteria for the assembly between the framings In particular the book examines the technical interfaces of the main advanced envelope systems with respect to the functional constructive and applicative coordination procedures of the mullions and transoms framing of the structural sealant glazing fa ade system of the unit fa ade system of the suspended fa ade system and of the double skin fa ade system The technical and manual character of the book is also expressed through the analysis of the functional and application procedures of the gaskets with respect to the fa ade systems in order to prevent the transmission of air and water loads the analysis focuses on the connections between the framing and the enclosure elements of the envelope in accordance with the compensation of height differences in order to guarantee impermeability airtightness and insulation Then the book describes the assembly and interface conditions between elements of different composition and production within the fa ade systems the examination of the technical interfaces involves the development and application of sealants based on the loads exerted on the jointing devices in order to fulfill the requirements of sealing and tightness with respect to mechanical thermal and hygrometric water air and wind stresses Moreover the study of the envelope systems examines the methodologies directed toward fulfilling the requirements with respect to the actions caused by fire loads considering the contents related to both components and connections and fixing surfaces

Construction Matters Stefan Holzer, Silke Langenberg, Clemens Knobling, Orkun Kasap, 2025-03-04 Construction History Construction Heritage Recent Construction Historiography Industrialization Engineering Sciences Building Materials Building Actors Construction History is still a fairly new and small but quickly evolving field The current trends in Construction History are well reflected in the papers of the present conference Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with the built heritage or building actors of the 20th or 21st century The conference also mirrors the wide spectrum of documentary and analytical approaches comprised within the discipline of Construction History Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers from economical aspects to social and political implications on legal aspects and the strong ties between the history of construction and the history of engineering sciences The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich Its two chairs the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation endeavor to cover the entire field and to bridge the gaps between the different approaches methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies *Facade Refurbishment Toolbox*. Thaleia Konstantinou, TU Delft, Architecture and the Built Environment, 2014-09-05 The starting point of the research is the need to refurbish existing residential building stock in order to reduce its energy demand which accounts for over one fourth of the energy consumption in the European Union Refurbishment is a necessary step to reach the ambitious energy and decarbonisation targets for 2020 and 2050 that require an eventual reduction up to 90% in CO2 emissions In this context the rate and depth of refurbishment need to grow The number of buildings to be renovated every year should increase while the energy savings in renovated buildings should be over 60% reduction to current energy demand To achieve that not only is it necessary to find politics and incentives but also to enable the building industry to design and construct effective refurbishment strategies This research focuses on refurbishment of the building envelope as it is very influential with regard to energy reduction *Project Management for Building Construction* Hans Sommer, 2011-11-29 Preface Construction has turned into an ever more complex At major structural engineering projects project mesh of relationships between increasingly accelerating participants from the most different areas of interests processes decisions and actions At the same

*Façades* Ulrich Knaack, Tillmann Klein, Marcel Bilow, Thomas Auer, 2014-09-05 Introduction to building façades as revised edition Façades determine the appearance of a building Hence they constitute a major element in architecture At the same time the building's envelope has important functions to fulfil such as lighting weatherproofing thermal insulation load transfer and sound insulation Over the past 15 years façades have become increasingly complex intelligent facades for instance adapt to changing climate and lighting conditions Newly developed materials and technologies have broadened the scope of façade functions This book demonstrates the principles of façade construction It systematically describes the most common types such as post and beam façade curtain wall corridor façade or double façade and provides guidelines for appropriate detailing Numerous drawings made especially for the book explain the principles of different types of facades which are then illustrated with built examples For this second edition all chapters were revised and all four examples in the case studies chapter were replaced by new material The new chapter Future Façades offers insights into what's next

**Glass in Building** Bernhard Weller, Stefan Unnewehr, Silke Tasche, Kristina Härth, 2012-12-10 Glass in Building opens up a whole range of fascinating design possibilities for the planning architect Glass has long served as a translucent room closing element but its range of possible uses is actually much wider It not only offers protection against the external world for example noise or fire despite its apparent fragility it can even take on load bearing functions in supporting structures In combination with various different finishing methods materials and coatings it also satisfies exacting structural physical standards Glass in Building offers a clear compact and illustrated overview of the material appropriate use of this varied and versatile material in building construction and provides information that goes far beyond the basics on designing with glass and producing and using specialized glass products as well as on the building and planning regulations that must be taken into account when constructing with glass A selection of exemplary realized projects rounds out the theoretical section Das Bauen mit Glas eröffnet dem planenden Architekten faszinierende gestalterische Möglichkeiten Schon lange dient es als

lichtdurchlässiger Raumabschluss ist aber weitaus vielfältiger einsetzbar Glas bietet nicht nur Schutz vor der Aussenwelt etwa gegen Lärm oder Feuer sondern kann trotz seiner vermeintlichen Zerbrechlichkeit sogar lastabtragende Funktionen innerhalb eines Tragwerks übernehmen In Kombination mit verschiedenen Veredelungsmethoden Materialien und Beschichtungen erfüllt es auch hohe bauphysikalische Anforderungen Detail Practice Konstruktiver Glasbau liefert einen kompakten anschaulichen Überblick über den materialgerechten Einsatz dieses facettenreichen Baustoffs in der Baukonstruktion und vermittelt weit über die Grundlagen hinausreichende Informationen zum Entwerfen mit Glas zur Herstellung und Anwendung spezieller Glasprodukte sowie zu den baurechtlichen Regelungen die im Glasbau zu berücksichtigen sind Eine Auswahl beispielhafter realisierter Projekte rundet den theoretischen Teil ab **High-Performance**

**Double Skin Façade Buildings** Mona Azarbayjani, 2022-07-13 This book provides a comprehensive theoretical platform for the use and construction of double skin façade projects The DSF concept has been used mostly in European buildings however its success in other climates should be addressed Increasing numbers of buildings are featuring double skin façade technology in the US however still relatively few have been studied for their performance in operation This book gives architects a practical guide to analyze and evaluate the actual performance of double skin façade buildings in different climatic contexts It is important for high performance buildings to have tools to evaluate a design's predicted performance to achieve specific sustainable goals To determine that the application of DSF in different climates will provide better thermal comfort building simulation tools analyze various thermal comfort parameters through studies of the façade and compare them with the actual building's performance data The book takes the reader on an on site tour of eight DSF buildings around the US Interviews with the buildings architects and engineers owners and users offer additional perspectives and insights into the construction and performance of these developments in building design This will provide architects with a comprehensive understanding of the challenges and opportunities in integrating double skin façades into their projects
