**Conducting Educational Design Research** Susan McKenney, Thomas Reeves, 2018-09-03 Educational design research blends scientific investigation with the systematic development and implementation of solutions to educational challenges Empirical inquiry is conducted in real learning settings not laboratories to craft effective solutions to the complex challenges facing educational practitioners At the same time the research is carefully structured to produce theoretical understanding that can serve the work of others Conducting Educational Design Research 2nd Edition has been written to support graduate students as well as experienced researchers who are new to this approach Part I describes the origins outcomes and generic approach Part II discusses the core processes of the generic approach in detail Part III recommends how to propose report and advance educational design research In addition to expanded treatment of research goals and practicalities more examples and attention to design based implementation research this new edition features enhanced guidance For each of the four core processes this volume offers assessment tools detailed behind the scenes descriptions of actual project work examples of how specific theories have been used to enrich the work For decades policies for educational research worldwide have swung back and forth between demanding rigor above all other concerns and increasing emphasis on impact These two qualities rigor and impact need not be mutually exclusive This volume supports readers in grasping and realizing the potential of educational design research It demonstrates how rigorous and relevant investigation can yield both theoretical understanding and solutions to urgent educational challenges

**Integrated Vehicle Health Management** Ian K Jennions, 2013-09-25 Integrated Vehicle Health Management IVHM is a relatively new subject with its roots back in the space sector of the early 1990s Although many of the papers written around that time did not refer to it as IVHM the fundamental principles of considering an integrated end to end system to monitor the overall health of the asset were clearly visible As the subject of Integrated Vehicle Health Management IVHM and its associated technologies have grown up businesses are making the transformation from selling a product to selling a service This can be viewed as a positive disruption as a

relatively small technology breakthrough is being brought to market for a large business benefit The sequence sense acquire transfer analyze act feeds the information processed data on the asset s health into the Operations or Management control center Here decisions can be made on maintenance actions with knowledge of the supply chain status MRO loading etc provided by Maintenance and Logistics systems Undoubtedly a much more efficient and economical modus operandi This book brings together a collection of twenty two SAE International Technical papers on this very theme organized according to specific areas of interest Engines Airframes Electrical Power Systems Supporting Systems Architecture They were selected by Dr Ian K Jennions Director of IVHM Center at Cranfield University in the UK Dr Jennions was also the editor of three other books on Integrated Vehicle Health Management published by SAE International IVHM Perspectives on an Emerging Field IVHM Business Case Theory and Practice IVHM The Technology

**Condition-Based Maintenance in Aviation** Ravi Rajamani,2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how different components degrade during operations it is possible to schedule inspections repairs and overhauls at appropriate intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety
