Circular Economy Realities Pauline Deutz, Walter J.V. Vermeulen, Rupert J. Baumgartner, Tomás B. Ramos, Andrea Raggi, 2024-07-30 This book addresses the realities of the circular economy a resource efficiency concept that has risen to global prominence in academic policy and business circles over the last decade Considered an approach to sustainable growth the volume critically analyses how sustainable emerging applications of a circular economy are in practice The book stems from an international interdisciplinary project exploring the discourses policies implementation and impacts of the circular economy across public private and third sector accounts It draws on a wide range of case studies from the UK Portugal Austria Italy the Netherlands France Chile China Nigeria Taiwan and Vietnam highlighting how experiences both shaped and were shaped by the places in which they were happening It provides a guide to researching a complex phenomenon such as a circular economy which involves both collaboration and competition between multiple stakeholders across different sectors and places Synthesising the multiple perspectives employed in the project the book makes recommendations for circular economy implementation in different contexts including the assessment of sustainability implications whilst indicating the limited potential for circular economy activity to bring social and economic benefits without explicit motivation for those to happen Benefitting from extensive empirical research this critical assessment of sustainability in the context of the circular economy will appeal to a broad readership of academics upper level students practitioners and policy makers in sustainable development business economics geography sociology and environmental engineering The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Rethinking Clusters Silvia Rita Sedita, Silvia Blasi, 2021-05-22 This volume discusses how different geographical spaces can enhance or hinder the capacity of a variety of organizational settings to achieve economic value creation in the pursuit of sustainable regional development In order to provide the most comprehensive picture of new sources of value creation for sustainable transitions the book collects contributions that tackle this issue from a variety of perspectives and adopts a systemic approach where macro meso and micro levels of analysis are intertwined in three sections This multidisciplinary and interdisciplinary approach comes from scholars operating in the fields of planning economic geography social entrepreneurship and organizational management The first section of the book adopts a macro level approach linking sustainability to the regional development theme and addresses how organizations work between different social interests to produce outcomes not previously realized The second section of the book focuses on the spatial dimensions of sustainable development with particular clusters industrial districts and regions considered as relevant units of analysis meso level analysis The third section of the book is dedicated to a micro level approach illustrating how to drive social entrepreneurship activities which are based upon sustainable business models centered in the creation of a shared value The book is geared towards scholars working on sustainable development issues

intersecting the disciplines of regional studies economic geography and management and will appeal to geographers and researchers in economic development business innovation and sustainability transitions *Sustainability and Innovation* Salah M. El-Haggag, 2016-05-04 One of the most urgent problems facing the world today is environmental sustainability Current practices of pollution control waste treatment and environmental protection are not only hugely expensive and a burden on development but also unsustainable in the long run for their steady depletion of the world's natural resources Any solutions must have proven economic benefits be technologically viable and meet prevailing environmental and social perspectives The main objective of this new set of studies is to describe methods that help to protect the environment and conserve natural resources This can be achieved by applying the cradle to cradle concept which aims to use materials in closed cyclic loops without generating any type of waste or pollution The authors provide the reader with an introduction to basic concepts of sustainable development describe the mechanisms and benefits of related technologies and suggest potential uses on a practical level by examining innovations developed in the mechanical engineering laboratories of the American University in Cairo Particular focus is placed on innovation as a vital means of attaining sustainability A timely contribution to the debate on environmentally sustainable practices this book will be indispensable to environmentalists scientists economists engineers development specialists and policy makers as well as being of interest to the lay reader
