**Cells and Biomaterials for Intervertebral Disc Regeneration** Sibylle Grad,Mauro Alini,David Eglin,Daisuke Sakai,Joji Mochida,Sunil Mahor,Biraja Dash,Abhay Pandit,Estelle Collin,2022-06-01 Disorders related to the intervertebral disc IVD are common causes of morbidity and of severe life quality deterioration IVD degeneration although in many cases asymptomatic is often the origin of painful neck and back diseases In Western societies IVD related pain and disability account for enormous health care costs as a result of work absenteeism and thus lost production disability benefits medical and insurance expenses Although only a small percentage of patients with disc disorders finally will undergo surgery spinal

surgery has been one of the fastest growing disciplines in the musculoskeletal field in recent years Nevertheless current treatment options are still a matter of controversial discussion In particular they hardly can restore normal spine biomechanics and prevent degeneration of adjacent tissues While degeneration affects all areas of the IVD the most constant and noticeable changes occur in the gel like central part the nucleus pulposus NP Recent emphasis has therefore been put in biological ways to regenerate the NP however there are a number of obstacles to overcome considering the exceptional biological and biomechanical environment of this tissue Different biological approaches such as molecular gene and cell based therapies have been investigated and have shown promising results in both in vitro and in vivo studies Nonetheless considerable hurdles still exist in their application for IVD regeneration in human patients The choice of the cells and the choice of the cell carrier suitable for implantation pose major challenges for research and development activities This lecture recapitulates the basics of IVD structure function and degeneration mechanisms The first part reviews the recent progress in the field of disc and stem cell based regenerative approaches In the second part most appropriate biomaterials that have been evaluated as cell or molecule carrier to cope with degenerative disc disease are outlined The potential and limitations of cell and biomaterial based treatment strategies and perspectives for future clinical applications are discussed

*Properties of Life* Bernd Rosslenbroich, 2023-09-19 A coherent and comprehensive theory of life that synthesizes the

specific properties of living organisms Despite continued advances science has until now struggled to describe the specific properties that define a living being By synthesizing several aspects of organismic biology and contemporary science Properties of Life by Bernd Rosslenbroich generates a coherent concept of the singular quality of being alive a concept that provides a crucial foundation for scientists farmers and medical practitioners and helps explain how we all interact with the world around us and within ourselves Is an organism an aggregate of parts or an integrated system with agency Is it a passive stimulus response machine or a being equipped with subjectivity and consciousness Rosslenbroich argues that the way people in different fields understand life determines their assumptions about organic function and behavior In medicine this extends to the human organism which influences prevention diagnosis and treatment Drawing attention to a long standing but underappreciated line of thought in organismic biology Rosslenbroich s original idea emphasizes the autonomy of living processes their network characteristics and their self determined organization in time and structure A timely and revelatory book Properties of Life formulates an integrated unified theory that remains flexible enough to accommodate future developments and resilient enough to withstand the challenges of different theoretical and disciplinary backgrounds
