1. A concentration gradient affects the direction that solutes diffuse. Describe how molecules move with respect to the concentration.

If there is a concentration gradient then the molecules will move from areas of high concentration to low until the gradient is equalized

2. How does size affect the rate of diffusion?

The membrane permeability factors such as when membranes pass through cells with diffusion or if a cell is too large it cannot pass through the cell and diffusion will be constrained

4. If a piece of celery is placed in a glass of pure water, are the celery cells hypertonic, hypotonic or isotonic compared to the water? In which direction will water move?

Celery cells are hypertonic when compared to clean water/pure water, and water will flow freely into the cells
