

Sample digestion

- The process of decomposing a solid sample into a liquid state by dissolving it using reagents such as strong acids, alkalis, or enzymes. The mixture of sample and reagent is usually heated to the point of boiling which greatly speeds up the dissolution process.
- Ash, biological matter, ceramics, cosmetics, food products, metals, minerals, pharmaceuticals, and more are routinely decomposed via acid digestion prior to analysis via precision techniques like inductively coupled plasma optical emissions spectroscopy (ICP-OES) or inductively coupled plasma mass spectroscopy (ICP-MS).
