Integrating Discovery-Based Research into the Undergraduate Curriculum National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Committee for Convocation on Integrating Discovery-Based Research into the Undergraduate Curriculum, 2016-01-07 Students who participate in scientific research as undergraduates report gaining many benefits from the experience However undergraduate research done independently under a faculty member's guidance or as part of an internship regardless of its individual benefits is inherently limited in its overall impact Faculty members and sponsoring companies have limited time and funding to support undergraduate researchers and most institutions have available or have allocated only enough human and financial resources to involve a small fraction of their

undergraduates in such experiences Many more students can be involved as undergraduate researchers if they do scientific research either collectively or individually as part of a regularly scheduled course Course based research experiences have been shown to provide students with many of the same benefits acquired from a mentored summer research experience assuming that sufficient class time is invested and several different potential advantages In order to further explore this issue the Division on Earth and Life Studies and the Division of Behavioral and Social Sciences and Education organized a convocation meant to examine the efficacy of engaging large numbers of undergraduate students who are enrolled in traditional academic year courses in the life and related sciences in original research civic engagement around scientific issues and or intensive study of research methods and scientific publications at both two and four year colleges and universities Participants explored the benefits and costs of offering students such experiences and the ways that such efforts may both influence and be influenced by issues such as institutional governance available resources and professional expectations of faculty Integrating Discovery Based Research into the Undergraduate Curriculum summarizes the presentations and discussions from this event

Green Chemistry Strategies for Drug Discovery Emily A. Peterson, Julie B Manley, 2015-06-11 The incorporation of Green Chemistry is a relatively new phenomenon in the drug discovery discipline since the scale that chemists operate on in drug discovery is smaller than those of process and manufacturing chemistry The necessary metrics are more difficult to obtain in drug discovery due to the diversity of reactions conducted However pharmaceutical companies are realizing that incorporation of green chemistry techniques at earlier stages of drug development can speed the development of a drug candidate Written by experts who have pioneered green chemistry efforts within their own institutions this book provides a practical guide for both academic and industrial labs wanting to know where to start with introducing greener approaches for greatest return on investment The Editors have taken a comprehensive approach to the topic covering the entire drug discovery process from molecule conception through synthesis formulation and toxicology with specific examples and case studies where green chemistry strategies have been implemented Emerging techniques for performing greener drug discovery chemistry are addressed as well as cutting edge topics like biologics discovery and continuous processing Moreover important surrounding issues such as intellectual property are included This book serves as a practical guide for both academic and industrial chemists who work across the breadth of the drug discovery discipline Ultimately readers will learn how to incorporate green chemistry strategies into their everyday workflow without slowing down their science

Labs of Our Own Sig / Sara Giordano,2025-02-11 From climate change to COVID 19 to reproductive justice there has been deep political polarization around science Labs of Our Own provides a unique entry point into these twenty first century science wars by focusing on our affective relationships to science The book delves into various sites where scientists teachers artists and activists claim to create more democratic access to science from DIY biology community labs to feminist classrooms to activist science practitioners The reader will find that these claims for and attempts at democratic sciences not only impact what counts as science and who counts as a scientist but reconfigure who is included in the proper public Instead of arguing for a knee jerk defense of science against right wing attacks Labs of Our Own builds the case for a feminist antiracist decolonial queer science tinkering practice that intentionally politically and ethically acts to produce new challenges to the definition and boundaries of the human

Discovering the Nanoscale Davis Baird, Alfred Nordmann, Joachim Schummer, 2004 I recommend this book to anyone interested in learning the history of nanoscale science and to those who would like to better understand some of the ethical legal and social dilemmas to what I believe has rightly been labeled the technology of the 21st century Rocky Rawstern Nanotechnology Now Science and engineering industry and politics environmentalists and transhumanists are Discovering the Nanoscale Policy makers are demanding explicit consideration of ethical legal and social aspects and popular books are explaining the achievements and promises of nanoscience It may therefore seem surprising that this is the first collection of studies that considers nanoscience and nanotechnologies from the critical perspective of Science and Technology Studies STS However when one appreciates that such a critical perspective needs to be historically informed it often involves intimate acquaintance with the research process Accordingly this book on the historical analytical and ethical study of nanoscience and technology has come together in a period of several years Though it presents only first results these results for the most part stem from sustained investigations of nanoscience and nanotechnologies and of the contexts that are shaping their development Nanoscience and technologies are developing very quickly and for this reason both pose a challenge to the more reflective approach commonly taken by science studies while at the same time requiring the perspective provided by science studies scholars Many are convinced that nothing meaningful can be said about the social and ethical implications of nanotechnologies at this early stage but one can already see what programmatic attitudes go into nanoscale research what metaphors are shaping it and what conception of nature is implicit in its vision It is also often assumed that in order to consider all aspects of nanotechnologies it is sufficient to know a bit of the science and to have some ethical intuitions This collection of papers establishes that one also needs to appreciate nanoscale research and development in the larger context of the changing relations of science technology and society
